

How to Install the F5 plugins for Firefox:

1. Save the F5extensions.zip file and extract it to your computer.
2. Run Firefox.
3. At the menu near the top, select *Help -> Troubleshooting Information* .
4. At the top of the newly opened tab, under **Application Basics** is a table. Five rows down in the table is **Profile Folder** and a *Show Folder* button. Click the *Show Folder* button. The Profile folder should have opened.
5. Copy the *extensions* and *webapps* folders from the zip file you extracted to the profile folder window that is open. (NOTE: Do not copy them on top of the existing webapps and extensions folders.)
6. You should see a prompt that asks if you want to merge the contents of both folders together. You want to select "Yes". If it asks if you want to overwrite the file, select "Yes" or Copy and Replace.
7. Close the Profile window and close Firefox.
8. Rerun Firefox, go to <https://f5.epa.ohio.gov> and see you are able to get a login prompt.
