CERTIFIED MAIL

**RE: Final Title V Chapter 3745-77
permit**

14-31-07-0076
Cincinnati Machine Div. Unova I.A.S.
Dan Sheehy
4701 Marburg Avenue
Cincinnati, OH 45209

Dear Dan Sheehy:

Enclosed is the Title V permit that allows you to operate the facility in the manner indicated in the permit. Because this permit may contain several conditions and restrictions, we urge you to read it carefully.

The Ohio EPA is encouraging companies to investigate pollution prevention and energy conservation. Not only will this reduce pollution and energy consumption, but it can also save you money. If you would like to learn ways you can save money while protecting the environment, please contact our Office of Pollution Prevention at (614) 644-3469.

You are hereby notified that this action of the Director is final and may be appealed to the Environmental Review Appeals Commission pursuant to Section 3745.04 of the Ohio Revised Code. The appeal must be in writing and set forth the action complained of and the grounds upon which the appeal is based. It must be filed with the Environmental Review Appeals Commission within thirty (30) days after notice of the Director's action. A copy of the appeal must be served on the Director of the Ohio Environmental Protection Agency within three (3) days of filing with the Commission. It is also requested by the Director that a copy of the appeal be served upon the Environmental Enforcement Section of the Office of the Attorney General. An appeal may be filed with the Environmental Review Appeals Commission at the following address:

Environmental Review Appeals Commission
236 East Town Street
Room 300
Columbus, Ohio 43215

If you have any questions, please contact Hamilton County Dept. of Environmental Services.

Very truly yours,

Thomas G. Rigo, Manager
Field Operations and Permit Section
Division of Air Pollution Control

cc: Hamilton County Dept. of Environmental Services
Becky Castle, DAPC PMU

Ohio EPA

State of Ohio Environmental Protection Agency

TITLE V PERMIT

Issue Date: 10/31/00

FINAL ISSUANCE

Effective Date: 10/31/00

Expiration Date: 10/31/05

This document constitutes issuance to:

Cincinnati Machine Div. Unova I.A.S.
4701 Marburg Avenue
Cincinnati, OH 45209

of a Title V permit for Facility ID: 14-31-07-0076

Emissions Unit ID (Company ID)/
Emissions Unit Activity Description:

B001 (Boiler #5)
73 MMBTU/hr boiler

B003 (Boiler #6)
114.9 MMBTU boiler

B004 (Boiler #4)
73 MMBTU/hr boiler

B005 (Boiler #3)
105.5 MMBTU boiler

You will be contacted approximately eighteen (18) months prior to the expiration date regarding the renewal of this permit. If you are not contacted, please contact the appropriate Ohio EPA District Office or local air agency listed below. This permit and the authorization to operate the air contaminant sources (emissions units) at this facility shall expire at midnight on the expiration date shown above. If a renewal permit is not issued prior to the expiration date, the permittee may continue to operate pursuant to OAC rule 3745-77-04(A) and in accordance with the terms of this permit beyond the expiration date, provided that a complete renewal application is submitted no earlier than eighteen (18) months and no later than one-hundred eighty (180) days prior to the expiration date.

Described below is the Ohio EPA District Office or local air agency that is responsible for processing and administering your Title V permit:

Hamilton County Dept. of Environmental Services
250 William Howard Taft Rd
Cincinnati, OH 45219-2660
(513) 946-7777

OHIO ENVIRONMENTAL PROTECTION AGENCY

Christopher Jones
Director

PART I - GENERAL TERMS AND CONDITIONS

A. State and Federally Enforceable Section

1. Monitoring and Related Recordkeeping and Reporting Requirements

- a. Except as may otherwise be provided in the terms and conditions for a specific emissions unit, the permittee shall maintain records that include the following, where applicable, for any required monitoring under this permit:
 - i. The date, place (as defined in the permit), and time of sampling or measurements.
 - ii. The date(s) analyses were performed.
 - iii. The company or entity that performed the analyses.
 - iv. The analytical techniques or methods used.
 - v. The results of such analyses.
 - vi. The operating conditions existing at the time of sampling or measurement.
- b. Each record of any monitoring data, testing data, and support information required pursuant to this permit shall be retained for a period of five years from the date the record was created. Support information shall include all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by this permit. Such records may be maintained in computerized form.
- c. Except as may otherwise be provided in the terms and conditions for a specific emissions unit, the permittee shall submit required reports in the following manner:
 - i. Reports of any required monitoring and/or recordkeeping information shall be submitted to the appropriate Ohio EPA District Office or local air agency.
 - ii. Quarterly written reports of (i) any deviations from federally enforceable emission limitations, operational restrictions, and control device operating parameter limitations, excluding deviations resulting from malfunctions reported in accordance with OAC rule 3745-15-06, that have been detected by the testing, monitoring and recordkeeping requirements specified in this permit, (ii) the probable cause of such deviations, and (iii) any corrective actions or preventive measures taken, shall be promptly made to the appropriate Ohio EPA District Office or local air agency. These quarterly written reports shall satisfy the requirements of OAC rule 3745-77-07(A)(3)(c)(i) and (ii) pertaining to the submission of monitoring reports every six months and OAC rule 3745-77-07(A)(3)(c)(iii) pertaining to the prompt reporting of all deviations except malfunctions, which shall be reported in accordance with OAC rule 3745-15-06. The written reports shall be submitted quarterly, i.e., by January 31, April 30, July 31, and October 31 of each year and shall cover the previous calendar quarters. (These quarterly reports shall exclude deviations resulting from malfunctions reported in accordance with OAC rule 3745-15-06.) See B.8 below if no deviations occurred during the quarter.
 - iii. Written reports, which identify any deviations from the federally enforceable monitoring, recordkeeping, and reporting requirements contained in this permit shall be submitted to the appropriate Ohio EPA District Office or local air agency every six months, i.e., by January 31 and July 31 of each year for the previous six calendar months. These semi-annual written reports shall satisfy the requirements of OAC rule 3745-77-07(A)(3)(c)(i) and (ii) pertaining to the reporting of any deviations related to the monitoring, recordkeeping, and reporting requirements. If no deviations occurred during a six-month period, the permittee shall submit a semi-annual report, which states that no deviations occurred during that period.

- iv. Each written report shall be signed by a responsible official certifying that, based on information and belief formed after reasonable inquiry, the statements and information in the report are true, accurate, and complete.

2. Scheduled Maintenance/Malfunction Reporting

Any scheduled maintenance of air pollution control equipment shall be performed in accordance with paragraph (A) of OAC rule 3745-15-06. The malfunction, i.e., upset, of any emissions units or any associated air pollution control system(s) shall be reported to the appropriate Ohio EPA District Office or local air agency in accordance with paragraph (B) of OAC rule 3745-15-06. (The definition of an upset condition shall be the same as that used in OAC rule 3745-15-06(B)(1) for a malfunction.) The verbal and written reports submitted pursuant to OAC rule 3745-15-06 shall satisfy the requirements of OAC rule 3745-77-07(A)(3)(c)(iii) pertaining to the prompt reporting of deviations caused by malfunctions or upsets.

Except as provided in that rule, any scheduled maintenance or malfunction necessitating the shutdown or bypassing of any air pollution control system(s) shall be accompanied by the shutdown of the emission unit(s) that is (are) served by such control system(s).

3. Risk Management Plans

If the permittee is required to develop and register a risk management plan pursuant to section 112(r) of the Clean Air Act, as amended, 42 U.S.C. 7401 et seq. ("Act"), the permittee shall comply with the requirement to register such a plan.

4. Title IV Provisions

If the permittee is subject to the requirements of 40 CFR Part 72 concerning acid rain, the permittee shall ensure that any affected emissions unit complies with those requirements. Emissions exceeding any allowances that are lawfully held under Title IV of the Act, or any regulations adopted thereunder, are prohibited.

5. Severability Clause

A determination that any term or condition of this permit is invalid shall not invalidate the force or effect of any other term or condition thereof, except to the extent that any other term or condition depends in whole or in part for its operation or implementation upon the term or condition declared invalid.

6. General Requirements

- a. The permittee must comply with all terms and conditions of this permit. Any noncompliance with the federally enforceable terms and conditions of this permit constitutes a violation of the Act, and is grounds for enforcement action or for permit revocation, revocation and reissuance, or modification, or for denial of a permit renewal application.
- b. It shall not be a defense for the permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the federally enforceable terms and conditions of this permit.

- c. This permit may be modified, reopened, revoked, or revoked and reissued, for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, or revocation, or of a notification of planned changes or anticipated noncompliance does not stay any term and condition of this permit.
- d. This permit does not convey any property rights of any sort, or any exclusive privilege.
- e. The permittee shall furnish to the Director of the Ohio EPA, or an authorized representative of the Director, upon receipt of a written request and within a reasonable time, any information that may be requested to determine whether cause exists for modifying, reopening or revoking this permit or to determine compliance with this permit. Upon request, the permittee shall also furnish to the Director or an authorized representative of the Director, copies of records required to be kept by this permit. For information claimed to be confidential in the submittal to the Director, if the Administrator of the U.S. EPA requests such information, the permittee may furnish such records directly to the Administrator along with a claim of confidentiality.

7. Fees

The permittee shall pay fees to the Director of the Ohio EPA in accordance with ORC section 3745.11 and OAC Chapter 3745-78.

8. Marketable Permit Programs

No revision of this permit is required under any approved economic incentive, marketable permits, emissions trading, and other similar programs or processes for changes that are provided for in this permit.

9. Reasonably Anticipated Operating Scenarios

The permittee is hereby authorized to make changes among operating scenarios authorized in this permit without notice to the Ohio EPA, but, contemporaneous with making a change from one operating scenario to another, the permittee must record in a log at the permitted facility the scenario under which the permittee is operating. The permit shield provided in these general terms and conditions shall apply to all operating scenarios authorized in this permit.

10. Reopening for Cause

This Title V permit will be reopened prior to its expiration date under the following conditions:

- a. Additional applicable requirements under the Act become applicable to one or more emissions units covered by this permit, and this permit has a remaining term of three or more years. Such a reopening shall be completed not later than eighteen months after promulgation of the applicable requirement. No such reopening is required if the effective date of the requirement is later than the date on which the permit is due to expire, unless the original permit or any of its terms and conditions has been extended pursuant to paragraph (E)(1) of OAC rule 3745-77-08.
- b. This permit is issued to an affected source under the acid rain program and additional requirements (including excess emissions requirements) become applicable. Upon approval by the Administrator, excess emissions offset plans shall be deemed to be incorporated into the permit, and shall not require a reopening of this permit.

- c. The Director of the Ohio EPA or the Administrator of the U.S. EPA determines that the federally applicable requirements in this permit are based on a material mistake, or that inaccurate statements were made in establishing the emissions standards or other terms and conditions of this permit related to such federally applicable requirements.
- d. The Administrator of the U.S. EPA or the Director of the Ohio EPA determines that this permit must be revised or revoked to assure compliance with the applicable requirements.

11. Federal and State Enforceability

Only those terms and conditions designated in this permit as federally enforceable, that are required under the Act, or any of its applicable requirements, including relevant provisions designed to limit the potential to emit of a source, are enforceable by the Administrator of the U.S. EPA, the State, and citizens under the Act. All other terms and conditions of this permit shall not be federally enforceable and shall be enforceable under State law only.

12. Compliance Requirements

- a. Any document (including reports) required to be submitted and required by a federally applicable requirement in this Title V permit shall include a certification by a responsible official that, based on information and belief formed after reasonable inquiry, the statements in the document are true, accurate, and complete.
- b. Upon presentation of credentials and other documents as may be required by law, the permittee shall allow the Director of the Ohio EPA or an authorized representative of the Director to:
 - i. At reasonable times, enter upon the permittee's premises where a source is located or the emissions-related activity is conducted, or where records must be kept under the conditions of this permit.
 - ii. Have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit, subject to the protection from disclosure to the public of confidential information consistent with paragraph (E) of OAC rule 3745-77-03.
 - iii. Inspect at reasonable times any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under this permit.
 - iv. As authorized by the Act, sample or monitor at reasonable times substances or parameters for the purpose of assuring compliance with the permit and applicable requirements.
- c. The permittee shall submit progress reports to the appropriate Ohio EPA District Office or local air agency concerning any schedule of compliance for meeting an applicable requirement. Progress reports shall be submitted semiannually, or more frequently if specified in the applicable requirement or by the Director of the Ohio EPA. Progress reports shall contain the following:
 - i. Dates for achieving the activities, milestones, or compliance required in any schedule of compliance, and dates when such activities, milestones, or compliance were achieved.
 - ii. An explanation of why any dates in any schedule of compliance were not or will not be met, and any preventive or corrective measures adopted.
- d. Compliance certifications concerning the terms and conditions contained in this permit that are federally enforceable emission limitations, standards, or work practices, shall be submitted to

the appropriate Ohio EPA District Office or local air agency in the following manner and with the following content:

- i. Compliance certifications shall be submitted annually on a calendar year basis. The annual certification shall be submitted on or before April 30th of each year during the permit term.
- ii. Compliance certifications shall include the following:
 - (a) An identification of each term or condition of this permit that is the basis of the certification.
 - (b) The permittee's current compliance status.
 - (c) Whether compliance was continuous or intermittent.
 - (d) The method(s) used for determining the compliance status of the source currently and over the required reporting period.
 - (e) Such other facts as the Director of the Ohio EPA may require in the permit to determine the compliance status of the source.
- iii. Compliance certifications shall contain such additional requirements as may be specified pursuant to sections 114(a)(3) and 504(b) of the Act.

13. Permit Shield

- a. Compliance with the terms and conditions of this permit (including terms and conditions established for alternate operating scenarios, emissions trading, and emissions averaging, but excluding terms and conditions for which the permit shield is expressly prohibited under OAC rule 3745-77-07) shall be deemed compliance with the applicable requirements identified and addressed in this permit as of the date of permit issuance.
- b. This permit shield provision shall apply to any requirement identified in this permit pursuant to OAC rule 3745-77-07(F)(2), as a requirement that does not apply to the source or to one or more emissions units within the source.

14. Operational Flexibility

The permittee is authorized to make the changes identified in OAC rule 3745-77-07(H)(1)(a) to (H)(1)(c) within the permitted stationary source without obtaining a permit revision, if such change is not a modification under any provision of Title I of the Act [as defined in OAC rule 3745-77-01(JJ)], and does not result in an exceedance of the emissions allowed under this permit (whether expressed therein as a rate of emissions or in terms of total emissions), and the permittee provides the Administrator of the U.S. EPA and the appropriate Ohio EPA District Office or local air agency with written notification within a minimum of seven days in advance of the proposed changes, unless the change is associated with, or in response to, emergency conditions. If less than seven days notice is provided because of a need to respond more quickly to such emergency conditions, the permittee shall provide notice to the Administrator of the U.S. EPA and the appropriate District Office of the Ohio EPA or local air agency as soon as possible after learning of the need to make the change. The notification shall contain the items required under OAC rule 3745-77-07(H)(2)(d).

15. Emergencies

The permittee shall have an affirmative defense of emergency to an action brought for noncompliance with technology-based emission limitations if the conditions of OAC rule 3745-77-07(G)(3) are met.

This emergency defense provision is in addition to any emergency or upset provision contained in any applicable requirement.

16. Off Permit Changes

The owner or operator of a Title V source may make any change in its operations or emissions at the source that is not specifically addressed or prohibited in the Title V permit, without obtaining an amendment or modification of the permit, provided that the following conditions are met:

- a. The change does not result in conditions that violate any applicable requirements or that violate any existing federally enforceable permit term or condition;
- b. The permittee provides contemporaneous written notice of the change to the director and the administrator, except that no such notice shall be required for changes that qualify as insignificant emission levels or activities as defined in OAC rule 3745-77-01(U). Such written notice shall describe each such change, the date of such change, any change in emissions or pollutants emitted, and any federally applicable requirement that would apply as a result of the change;
- c. The change shall not qualify for the permit shield under OAC rule 3745-77-07(F);
- d. The permittee shall keep a record describing all changes made at the source that result in emissions of a regulated air pollutant subject to an applicable requirement, but not otherwise regulated under the permit, and the emissions resulting from those changes; and
- e. The change is not subject to any applicable requirement under Title IV of the Act or is not a modification under any provision of Title I of the Act.

Paragraph (I) of rule 3745-77-07 of the Administrative Code applies only to modification or amendment of the permittee's Title V permit. The change made may require a permit to install under Chapter 3745-31 of the Administrative Code if the change constitutes a modification as defined in that Chapter. Nothing in paragraph (I) of rule 3745-77-07 of the Administrative Code shall affect any applicable obligation under Chapter 3745-31 of the Administrative Code.

(For further clarification, the permittee can refer to Engineering Guide #63 that is available in their STARSHIP software package.)

17. Compliance Method Requirements

Nothing in this permit shall alter or affect the ability of any person to establish compliance with, or a violation of, any applicable requirement through the use of credible evidence to the extent authorized by law. Nothing in this permit shall be construed to waive any defenses otherwise available to the permittee, including but not limited to, any challenge to the Credible Evidence Rule (see 62 Fed. Reg. 8314, Feb. 24, 1997), in the context of any future proceeding.

B. State Only Enforceable Section

1. Permit to Install Requirement

Prior to the “installation” or “modification” of any “air contaminant source,” as those terms are defined in OAC rule 3745-31-01, a permit to install must be obtained from the Ohio EPA pursuant to OAC Chapter 3745-31.

2. Reporting Requirements Related to Monitoring and Recordkeeping Requirements

The permittee shall submit required reports in the following manner:

- a. Reports of any required monitoring and/or recordkeeping information shall be submitted to the appropriate Ohio EPA District Office or local air agency.
- b. Except as otherwise may be provided in the terms and conditions for a specific emissions unit, quarterly written reports of (a) any deviations (excursions) from emission limitations, operational restrictions, and control device operating parameter limitations that have been detected by the testing, monitoring, and recordkeeping requirements specified in this permit, (b) the probable cause of such deviations, and (c) any corrective actions or preventive measures which have been or will be taken, shall be submitted to the appropriate Ohio EPA District Office or local air agency. If no deviations occurred during a calendar quarter, the permittee shall submit a quarterly report, which states that no deviations occurred during that quarter. The reports shall be submitted quarterly, i.e., by January 31, April 30, July 31, and October 31 of each year and shall cover the previous calendar quarters. (These quarterly reports shall exclude deviations resulting from malfunctions reported in accordance with OAC rule 3745-15-06.)

3. Records Retention Requirements

Each record of any monitoring data, testing data, and support information required pursuant to this permit shall be retained for a period of five years from the date the record was created. Support information shall include, but not be limited to, all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by this permit. Such records may be maintained in computerized form.

4. Inspections and Information Requests

The Director of the Ohio EPA, or an authorized representative of the Director, may, subject to the safety requirements of the permittee and without undue delay, enter upon the premises of this source at any reasonable time for purposes of making inspections, conducting tests, examining records or reports pertaining to any emission of air contaminants, and determining compliance with any applicable State air pollution laws and regulations and the terms and conditions of this permit. The permittee shall furnish to the Director of the Ohio EPA, or an authorized representative of the Director, upon receipt of a written request and within a reasonable time, any information that may be requested to determine whether cause exists for modifying, reopening or revoking this permit or to determine compliance with this permit. Upon verbal or written request, the permittee shall also furnish to the Director of the Ohio EPA, or an authorized representative of the Director, copies of records required to be kept by this permit.

5. Scheduled Maintenance/Malfunction Reporting

Any scheduled maintenance of air pollution control equipment shall be performed in accordance with paragraph (A) of OAC rule 3745-15-06. The malfunction of any emissions units or any associated air pollution control system(s) shall be reported to the appropriate Ohio EPA District Office or local air agency in accordance with paragraph (B) of OAC rule 3745-15-06. Except as provided in that rule, any scheduled maintenance or malfunction necessitating the shutdown or bypassing of any air pollution control system(s) shall be accompanied by the shutdown of the emissions unit(s) that is (are) served by such control system(s).

6. Permit Transfers

Any transferee of this permit shall assume the responsibilities of the prior permit holder. The appropriate Ohio EPA District Office or local air agency must be notified in writing of any transfer of this permit.

7. Air Pollution Nuisance

The air contaminants emitted by the emissions units covered by this permit shall not cause a public nuisance, in violation of OAC rule 3745-15-07.

8. Additional Reporting Requirements When There Are No Deviations of Federally Enforceable Emission Limitations, Operational Restrictions, or Control Device Operating Parameter Limitations (See Section A of This Permit)

If no deviations occurred during a calendar quarter, the permittee shall submit a quarterly report, which states that no deviations occurred during that quarter. The reports shall be submitted quarterly, i.e., by January 31, April 30, July 31, and October 31 of each year and shall cover the previous calendar quarters.

Part II - Specific Facility Terms and Conditions

A. State and Federally Enforcable Section

None

B. State Only Enforceable Section

1. The following insignificant emissions units are located at this facility:

F001 Wood Chipper
P001 Flyash Handling
Z001 Coal Handling
Z002 Fuel Storage Piles
Z003 Roadways and Parking Lots

Each insignificant emissions unit at this facility must comply with all applicable State and federal regulations, as well as any emission limitations and/or control requirements contained within a permit to install for the emissions unit.

Part III - Terms and Conditions for Emissions Units

Emissions Unit ID: Boiler #5 (B001)
Activity Description: 73 MMBTU/hr boiler

A. State and Federally Enforceable Section

I. Applicable Emissions Limitations and/or Control Requirements

- The specific operation(s), property, and/or equipment which constitute this emissions unit are listed in the following table along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures. Emissions from this unit shall not exceed the listed limitations, and the listed control measures shall be employed. Additional applicable emissions limitations and/or control measures (if any) may be specified in narrative form following the table.

<u>Operations, Property, and/or Equipment</u>	<u>Applicable Rules/ Requirements</u>	<u>Applicable Emissions Limitations/Control Measures</u>
73 MMBtu/Hr coal-fired boiler with ESP(wood, used grinding oil, and used oil filter cores burned as supplemental fuel)	OAC 3745-17-07 (A)	Visible emissions shall not exceed 20% opacity, as a six-minute average, except as specified by rule.
	OAC 3745-17-10 (C)	Particulate emissions shall not exceed 0.14 lb per MMBtu of actual heat input.
	OAC 3745-18-37 (F)	Sulfur dioxide emissions shall not exceed 2.0 lbs per MMBtu of actual heat input.

2. Additional Terms and Conditions

None

II. Operational Restrictions

- Fuel burning units B001, B003, B004, and B005 are united physically or operationally at this plant. Due to the derated capacity for B003, the total heat input of all fuel burning units united physically or operationally at this plant is reduced from 395.1 MMBtu/hr to 366.4 MMBtu/hr. Based on the total heat input of 366.4 MMBtu/hr, the allowable particulate emissions rate for B001, from Figure I (Curve P-1) of OAC rule 3745-17-10, is 0.14 pound per MMBtu actual heat input.

Note: Pursuant to OAC rule 3745-17-10(B)(3)(d), the derating of B003 shall not revise the federally enforceable requirements of the state implementation plan until approved by the U.S. Environmental Protection Agency. Prior to the derating of B003 and based on the total heat input of 395.1 MMBtu/hr, the allowable particulate emissions rate for B001, from Figure I (Curve P-1) of OAC rule 3745-17-10, is 0.13 pound per MMBtu actual heat input.

- In this emissions unit, the permittee shall not burn municipal solid waste (MSW) as defined in 40 CFR 60.51a. In this emissions unit, the permittee shall burn used oil filter cores that meet the provisions of 40 CFR 261.4(b)(13) and used oil (used grinding fluid) that meets the definition of "used oil" under 40 CFR 279.
- The permittee shall operate the ESP during any operation of this emissions unit, except the ESP may not be operated during periods of start up until the exhaust gases have achieved a temperature of 250 degrees Fahrenheit at the inlet of the ESP or during periods of shutdown when the temperature of the exhaust gases has dropped below 250 degrees Fahrenheit at the inlet of the ESP.

II. Operational Restrictions (continued)

4. The average total combined power input (in kilowatts) to all fields of the ESP, for any 3-hour block of time when the emissions unit is in operation, shall be no less than 90 percent of the total combined power input, as a 3-hour average, during the most recent emissions test that demonstrated the emissions unit was in compliance with the particulate emission limitation.

III. Monitoring and/or Record Keeping Requirements

1. The permittee shall obtain a fuel supplier analysis for each shipment of coal or perform monthly coal composite sampling and analysis in accordance with OAC rule 3745-18-04(D)(8)(c). For the monthly coal composite sample, the permittee shall collect representative grab samples of the coal burned in this emissions unit on a frequency of at least once per week. Each sample shall be collected from the feed conveyor. The coal sampling shall be performed in accordance with ASTM method D2234, Collection of a Gross Sample of Coal, and Method 19 of 40 CFR 60, Appendix A. At the end of each calendar month, all of the grab samples which were collected during that calendar month shall be combined into one composite sample.

As provided in OAC rule 3745-18-04(D)(8)(d), the permittee may obtain a representative coal sample each week from B001, B003, B004, and B005 in lieu of either the coal supplier analysis for each coal shipment or the monthly composite coal sampling specified above.

Each coal supplier shipment or each monthly composite sample of coal from B001 (or each weekly representative coal sample from B001, B003, B004, and B005) shall be analyzed for sulfur content (weight percent) and heat content/gross calorific value (Btu/pound) in accordance with Method 19 of 40 CFR 60, Appendix A.

For each coal supplier analysis or each analyzed sample of coal, the representative sulfur dioxide emission rate shall be calculated using the following formula from OAC rule 3745-18-04(G)(1):

$$ER = (1 \times 10^6) \times S \times 1.95 / H$$

where:

ER = the emission rate in pounds of sulfur dioxide per MM Btu;

H = the heat content of the solid fuel in Btu per pound; and

S = the decimal fraction of sulfur in the solid fuel.

The permittee shall maintain weekly records of the total quantity of coal burned, the results of the analyses for sulfur content and heat content, and the calculated representative sulfur dioxide emission rate for each analysis.

III. Monitoring and/or Record Keeping Requirements (continued)

2. The permittee shall obtain a fuel supplier analysis for each shipment of used grinding oil and each shipment of used oil filter cores or perform monthly fuel composite sampling and analysis in accordance with OAC rule 3745-18-04(E)(3). For the monthly fuel composite sample, the permittee shall collect representative grab samples of the used grinding oil and used oil filters burned in this emissions unit on a frequency of at least once per week. Each sample will be collected from the holding tank.

Each fuel supplier shipment or each on-site composite sample shall be analyzed for density (pounds/gallon), sulfur content (weight percent) and heat content/gross calorific value (Btu/pound) in accordance with Method 19 of 40 CFR 60, Appendix A.

For each fuel supplier analysis or each on-site composite analysis, the representative sulfur dioxide emission rate shall be calculated using the following formula from OAC rule 3745-18-04(G)(2):

$$ER = (1 \times 10^6) \times D \times S \times 1.974 / H$$

where:

ER = the emission rate in pounds of sulfur dioxide per MM Btu;

H = the heat content of the liquid fuel in Btu per gallon;

D = the density of the liquid fuel in pounds per gallon; and

S = the decimal fraction of sulfur in the liquid fuel.

The permittee shall maintain records of the total quantity of used grinding oil and used oil filter cores received and burned each month, the fuel supplier or permittee's analyses for density, sulfur content, and heat content, and the calculated representative sulfur dioxide emission rate for each analysis.

3. The permittee shall maintain records for each shipment of used oil filter cores which document compliance with the requirements of 40 CFR 261.4(b)(13). The permittee shall maintain records for each shipment of used grinding oil which document compliance with the used oil specifications under 40 CFR 279.11.
4. The permittee shall maintain records of the quantity of wood burned per month, in pounds, and the average heat input from the burning of wood (pounds of wood burned multiplied by 5,200 Btu per pound of wood).
5. Monitoring of air emissions control equipment and the boiler shall be performed in accordance with an operation and maintenance plan that is consistent with the manufacturer's recommendations. Records of inspections and maintenance activities for the control equipment and boiler shall be maintained in accordance with a written operations and maintenance plan for the boiler and control equipment.
6. The permittee shall monitor and record the following on an hourly basis during any operation of the ESP:
 - a. the secondary voltage, in kilovolts (kV), and the secondary current in amps, for each transformer rectifier (TR) set in the ESP;
 - b. the power input (in kilowatts) of each TR set for each hour (calculated by multiplying the secondary voltage (in kilovolts) by the secondary current (in amps) for each TR set); and
 - c. the total power input to the ESP for each hour (add together the power inputs for the TR sets operating during the hour).

III. Monitoring and/or Record Keeping Requirements (continued)

7. The permittee shall operate and maintain a temperature monitor and recorder that measures and records the temperature of the boiler exhaust gases entering the ESP as follows:
 - a. during all periods of start up until the ESP is operational or until the inlet temperature of the ESP achieves the temperature level specified in OAC rule 3745-17-07(A)(3)(a)(i); and
 - b. during all periods of shutdown until the inlet temperature to the ESP drops below the temperature level specified in OAC rule 3745-17-07(A)(3)(b)(i).

The temperature monitor and recorder shall be installed, calibrated, operated and maintained in accordance with the manufacturer's recommendations, with any modifications deemed necessary by the permittee, and shall be capable of accurately measuring the temperature of the boiler exhaust gases in degrees Fahrenheit.

8. The permittee shall record the following information for each day:
 - a. all 3-hour blocks of time during which the average total combined power input to the ESP, when the emissions unit was in operation, was less than 90 percent of the total combined power input, as a 3-hour average, during the most recent emissions test that demonstrated the emissions unit was in compliance with the particulate emission limitation; and
 - b. the duration of the downtime for the monitoring equipment specified in section A.III.5 above, the ESP sections that are out of service, and the duration of the downtime for each section, when the associated emissions unit was in operation.

IV. Reporting Requirements

1. The permittee shall submit deviation (excursion) reports which identify all coal supplier analyses and/or all coal sample analyses in which the representative sulfur dioxide emission rate (required in section A.III.1.) exceeded the emission limit specified in section A.I.1. of this permit.
2. The permittee shall submit deviation (excursion) reports which identify all supplier analyses for used grinding oil and used oil filter cores and/or all permittee analyses for on-site samples of used grinding oil and used oil filter cores in which the representative sulfur dioxide emission rate (required in section A.III.2.) exceeded the emission limit specified in section A.I.1. of this permit.
3. The permittee shall submit deviation (excursion) reports which identify all periods of time during start-up and shutdown of the emissions unit when the ESP was not in operation and the temperature of the boiler exhaust gases exceeded the temperature levels specified in OAC rule 3745-17-07(A)(3)(a)(i) and (b)(i).
4. The permittee shall submit deviation (excursion) reports which identify all 3-hour blocks of time during which the average total combined power input to all fields of the ESP does not comply with the operational restriction specified in section A.II.3. of this permit.
5. The permittee shall submit quarterly reports which identify the sections of the ESP that were out of service along with the time period(s) involved. These quarterly reports shall be submitted by January 30, April 30, July 30, and October 30 of each year and shall address the information obtained during the previous calendar quarter.

V. Testing Requirements

1. Compliance with emission limits for visible emissions as established in OAC 3745-17-07(A) shall be demonstrated by methods outlined in OAC 3745-17-03(B)(1).

V. Testing Requirements (continued)

2. The permittee shall conduct, or have conducted, emission testing for this emissions unit in accordance with the following requirements:
 - a. The emission testing shall be conducted within 16 months after issuance of this permit and within 16 months prior to the expiration of this permit.
 - b. The emission testing shall be conducted to demonstrate compliance with the particulate and sulfur dioxide emission limitations in section A.I.1.
 - c. The following test method(s) shall be employed to demonstrate compliance with the allowable mass emission rate(s):

Method 5 of 40 CFR Part 60, Appendix A for particulate matter, and
Method 6 of 40 CFR Part 60, Appendix A for sulfur dioxide.

Alternative U.S. EPA approved test methods may be used with prior approval from the Ohio EPA.

- d. The test(s) shall be conducted while the emissions unit is operating at or near its maximum capacity. The test shall be run while the emissions unit is burning the maximum amount of used grinding oil and used oil filter cores as supplemental fuels. Also, the testing provisions of OAC rule 3745-17-03(B)(9) and OAC rules 3745-18-04(D)(7) and (E)(5) shall be met.

Not later than 30 days prior to the proposed test date(s), the permittee shall submit an "Intent to Test" notification to the appropriate Ohio EPA District Office or local air agency. The "Intent to Test" notification shall describe in detail the proposed test methods and procedures, the emissions unit operating parameters, the time(s) and date(s) of the test(s), and the person(s) who will be conducting the test(s). Failure to submit such notification for review and approval prior to the test(s) may result in the Ohio EPA District Office's or local air agency's refusal to accept the results of the emission test(s).

Personnel from the appropriate Ohio EPA District Office or local air agency shall be permitted to witness the test(s), examine the testing equipment, and acquire data and information necessary to ensure that the operation of the emissions unit and the testing procedures provide a valid characterization of the emissions from the emission unit and/or the performance of the control equipment.

A comprehensive written report on the results of the emissions test(s) shall be signed by the person or persons responsible for the tests and submitted to the appropriate Ohio EPA District Office or local air agency within 30 days following completion of the test(s). The permittee may request additional time for the submittal of the written report where warranted, with prior approval from the appropriate Ohio EPA District Office or local air agency.

3. Compliance with the allowable sulfur dioxide emission rate shall be determined by the monitoring and record keeping requirements in sections A.III.1. and A.III.2. and the stack testing requirements in section A.V.2.

VI. Miscellaneous Requirements

1. The permittee shall notify this Ohio EPA field office of an intent to burn any fuel other than those listed in this permit. Alternative fuels will be evaluated on a case-by-case basis after the permittee provides written notification to this field office with information sufficient to evaluate the intended change in fuels.

B. State Enforceable Section

I. Applicable Emissions Limitations and/or Control Requirements

- The specific operation(s), property, and/or equipment which constitute this emissions unit are listed in the following table along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures. Emissions from this unit shall not exceed the listed limitations, and the listed control measures shall be employed. Additional applicable emissions limitations and/or control measures (if any) may be specified in narrative form following the table.

<u>Operations, Property, and/or Equipment</u>	<u>Applicable Rules/ Requirements</u>	<u>Applicable Emissions Limitations/Control Measures</u>
73 MMBtu/Hr coal-fired boiler with ESP(wood, used grinding oil, and used oil filter cores burned as supplemental fuel)		

2. Additional Terms and Conditions

None

II. Operational Restrictions

- Prior to burning any off-specification used oil (i.e., used grinding oil that doesn't meet the specifications contained in section B.II.2.), the permittee shall ensure that the requirements of subpart G of 40 CFR 279 are met.
- Based on Table 1 of 40 CFR 279.11, the specifications for on-specification used oil are the following:

Used Oil Specification Levels \1\

Constituent/property	Allowable level
Arsenic.....	5 ppm maximum.
Cadmium.....	2 ppm maximum.
Chromium.....	10 ppm maximum.
Lead.....	100 ppm maximum.
Flash point.....	100 deg. F minimum.
Total halogens.....	4,000 ppm maximum.\2\

Note: Applicable standards for the burning of used oil containing PCBs are imposed by 40 CFR 761.20(e).

\1\ The specification does not apply to mixtures of used oil and hazardous waste that continue to be regulated as hazardous waste [see 40 CFR 279.10(b)].

\2\ Used oil containing more than 1,000 ppm total halogens is presumed to be a hazardous waste under the rebuttable presumption provided under 40 CFR 279.10(b)(1). Such used oil is subject to subpart H of 40 CFR 266 rather than 40 CFR 279 when burned for energy recovery unless the presumption of mixing can be successfully rebutted.

3. Other Regulatory Requirements Concerning Disposal or Recycling of Used Oil

In accordance with OAC rule 3745-31-05(A)(2), the permittee shall comply with all applicable laws as defined in OAC rule 3745-31-01(F). Therefore, this permit cannot exempt the permittee from any current or future regulations regarding the disposal or recycling of used oil, as they relate to this emissions unit.

III. Monitoring and/or Record Keeping Requirements

1. For each shipment of used oil filter cores and used grinding oil, the supplier or the permittee shall collect a representative sample of the used oil filter cores (decanted oil) and used grinding oil, respectively, and obtain an analysis of the sample by an independent laboratory for the following:
 - a. quantity of decanted used oil received for analysis;
 - b. arsenic content;
 - c. cadmium content;
 - d. chromium content;
 - e. lead content;
 - f. PCB content;
 - g. total halogen content, and
 - h. heat content.

The testing procedures for arsenic, cadmium, chromium, lead, total halogens are contained in EPA publication SW-846 "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" (Third Edition) that was last amended in December 1996. The testing procedures for determining flash point are in ASTM D-3278-78, ASTM D-93-79, ASTM D-93-80, ASTM D-3278-89, or ASTM D-93-90. The testing procedures for PCB content of used oil are specified under 40 CFR 761.20(e)(2), 40 CFR 761.60(g)(2), and 40 CFR 761.60(g)(1)(iii).

IV. Reporting Requirements

1. The permittee shall notify the Ohio EPA if any of the used oil doesn't meet the used oil specifications of section B.II.2 within 30 days after becoming aware of such results. An identification number from USEPA shall be obtained prior to the combustion of any off-specification used oil within this boiler.

V. Testing Requirements

1. Compliance with the used oil specifications of B.II.2. shall be demonstrated by the recordkeeping and reporting requirements in sections B.III. and B.IV. of these terms and conditions.

VI. Miscellaneous Requirements

None

Part III - Terms and Conditions for Emissions Units

Emissions Unit ID: Boiler #6 (B003)
Activity Description: 114.9 MMBTU boiler

A. State and Federally Enforceable Section

I. Applicable Emissions Limitations and/or Control Requirements

- The specific operation(s), property, and/or equipment which constitute this emissions unit are listed in the following table along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures. Emissions from this unit shall not exceed the listed limitations, and the listed control measures shall be employed. Additional applicable emissions limitations and/or control measures (if any) may be specified in narrative form following the table.

<u>Operations, Property, and/or Equipment</u>	<u>Applicable Rules/ Requirements</u>	<u>Applicable Emissions Limitations/Control Measures</u>
143.6 MMBtu/Hr coal-fired boiler with ESP (derated to 114.9 MMBtu/Hr)	OAC 3745-17-07 (A)	Visible emissions shall not exceed 20% opacity, as a six-minute average, except as specified by rule.
	OAC 3745-17-10 (C)	Particulate emissions shall not exceed 0.14 lb per MMBtu of actual heat input.
	OAC 3745-18-37 (F)	Sulfur dioxide emissions shall not exceed 2.0 lbs per MMBtu of actual heat input.

2. Additional Terms and Conditions

None

II. Operational Restrictions

- Pursuant to OAC rule 3745-17-10(B)(3), the total heat input for B003 is derated from 143.6 MMBtu/hr to 114.9 MMBtu/hr. (The derated total heat input of 114.9 MMBtu/hr corresponds to a steam load of 88,000 pounds per hour.) Fuel burning units B001, B003, B004, and B005 are united physically or operationally at this plant. Due to the derated capacity for B003, the total heat input of all fuel burning units united physically or operationally at this plant is reduced from 395.1 MMBtu/hr to 366.4 MMBtu/hr. Based on the total heat input of 366.4 MMBtu/hr, the allowable particulate emissions rate for B003, from Figure I (Curve P-1) of OAC rule 3745-17-10, is 0.14 pound per MMBtu actual heat input. At no time shall the steam flow rate from B003 exceed 88,000 pounds per hour (as an average over any one-hour period).

Note: Pursuant to OAC rule 3745-17-10(B)(3)(d), the derating of B003 shall not revise the federally enforceable requirements of the state implementation plan until approved by the U.S. Environmental Protection Agency. Prior to the derating of B003 and based on the total heat input of 395.1 MMBtu/hr, the allowable particulate emissions rate for B003, from Figure I (Curve P-1) of OAC rule 3745-17-10, is 0.13 pound per MMBtu actual heat input.

- In this emissions unit, the permittee shall not burn municipal solid waste (MSW) as defined in 40 CFR 60.51a.

II. Operational Restrictions (continued)

3. The permittee shall operate the ESP during any operation of this emissions unit, except the ESP may not be operated during periods of start up until the exhaust gases have achieved a temperature of 250 degrees Fahrenheit at the inlet of the ESP or during periods of shutdown when the temperature of the exhaust gases has dropped below 250 degrees Fahrenheit at the inlet of the ESP.
4. The average total combined power input (in kilowatts) to all fields of the ESP, for any 3-hour block of time when the emissions unit is in operation, shall be no less than 90 percent of the total combined power input, as a 3-hour average, during the most recent emissions test that demonstrated the emissions unit was in compliance with the particulate emission limitation.

III. Monitoring and/or Record Keeping Requirements

1. The permittee shall collect weekly, as-fired samples of the coal burned in this emissions unit. Each sample shall be collected from the feed conveyor. The coal sampling shall be performed in accordance with ASTM method D2234, Collection of a Gross Sample of Coal, and Method 19 of 40 CFR 60, Appendix A.

As provided in OAC rule 3745-18-04(D)(8)(d), the permittee may obtain a representative coal sample each week from B001, B003, B004, and B005 in lieu of the weekly coal sampling specified above.

Each weekly sample of coal shall be analyzed for sulfur content (weight percent) and heat content/gross calorific value (Btu/pound) in accordance with Method 19 of 40 CFR 60, Appendix A.

For each analyzed sample of coal, the representative sulfur dioxide emission rate shall be calculated using the following formula from OAC rule 3745-18-04(G)(1):

$$ER = (1 \times 10^6) \times S \times 1.95 / H$$

where:

ER = the emission rate in pounds of sulfur dioxide per MM Btu;

H = the heat content of the solid fuel in Btu per pound; and

S = the decimal fraction of sulfur in the solid fuel.

The permittee shall maintain weekly records of the total quantity of coal burned, the results of the analyses for sulfur content and heat content, and the calculated representative sulfur dioxide emission rate.

2. Monitoring of air emissions control equipment and the boiler shall be performed in accordance with an operation and maintenance plan that is consistent with the manufacturer's recommendations. Records of inspections and maintenance activities for the control equipment and boiler shall be maintained in accordance with a written operations and maintenance plan for the boilers and control equipment.
3. The permittee shall monitor and record the following on an hourly basis during any operation of the ESP:
 - a. the secondary voltage, in kilovolts (kV), and the secondary current in amps, for each transformer rectifier (TR) set in the ESP;
 - b. the power input (in kilowatts) of each TR set for each hour (calculated by multiplying the secondary voltage (in kilovolts) by the secondary current (in amps) for each TR set); and
 - c. the total power input to the ESP for each hour (add together the power inputs for the TR sets operating during the hour).

III. Monitoring and/or Record Keeping Requirements (continued)

4. The permittee shall record the following information for each day:
 - a. all 3-hour blocks of time during which the average total combined power input to the ESP, when the emissions unit was in operation, was less than 90 percent of the total combined power input, as a 3-hour average, during the most recent emissions test that demonstrated the emissions unit was in compliance with the particulate emission limitation; and
 - b. the duration of the downtime for the monitoring equipment specified in section A.III.5 above, the ESP sections that are out of service, and the duration of the downtime for each section, when the associated emissions unit was in operation.
5. The permittee shall operate and maintain a temperature monitor and recorder that measures and records the temperature of the boiler exhaust gases entering the ESP as follows:
 - a. during all periods of start up until the ESP is operational or until the inlet temperature of the ESP achieves the temperature level specified in OAC rule 3745-17-07(A)(3)(a)(i); and
 - b. during all periods of shutdown until the inlet temperature to the ESP drops below the temperature level specified in OAC rule 3745-17-07(A)(3)(b)(i).

The temperature monitor and recorder shall be installed, calibrated, operated and maintained in accordance with the manufacturer's recommendations, with any modifications deemed necessary by the permittee, and shall be capable of accurately measuring the temperature of the boiler exhaust gases in degrees Fahrenheit.
6. The permittee shall continuously monitor and record the steam flow rate for this emissions unit.

IV. Reporting Requirements

1. The permittee shall submit deviation (excursion) reports which identify all weekly coal samples in which the representative sulfur dioxide emission rate exceeded the emission limit specified in section A.I.1. of this permit.
2. The permittee shall submit deviation (excursion) reports which identify all periods of time during start-up and shutdown of the emissions unit when the ESP was not in operation and the temperature of the boiler exhaust gases exceeded the temperature levels specified in OAC rule 3745-17-07(A)(3)(a)(i) and (b)(i).
3. If for any reason the steam flow rate from B003 exceeds 88,000 pounds per hour, the following information shall be reported within 5 business days after the exceedance:
 - a. the date of the exceedance,
 - b. the time interval over which the exceedance occurred,
 - c. the value of the exceedance,
 - d. the cause(s) of the exceedance,
 - e. the corrective action which has been or will be taken to prevent similar exceedances in the future, and
 - f. a copy of the steam chart which shows the exceedance.
4. The permittee shall submit deviation (excursion) reports which identify all 3-hour blocks of time during which the average total combined power input to all fields of the ESP does not comply with the operational restriction specified in section A.II.3 of this permit.
5. The permittee shall submit quarterly reports which identify the sections of the ESP that were out of service along with the time period(s) involved. These quarterly reports shall be submitted by January 30, April 30, July 30, and October 30 of each year and shall address the information obtained during the previous calendar quarter.

V. Testing Requirements

1. Compliance with emission limits for visible emissions as established in OAC 3745-17-07(A) shall be demonstrated by methods outlined in OAC 3745-17-03(B)(1).
2. The permittee shall conduct, or have conducted, emission testing for this emissions unit in accordance with the following requirements:
 - a. The emission testing shall be conducted within 16 months after issuance of this permit and within 16 months prior to the expiration of this permit.
 - b. The emission testing shall be conducted to demonstrate compliance with the particulate and sulfur dioxide emission limitations in section A.I.1.
 - c. The following test method(s) shall be employed to demonstrate compliance with the allowable mass emission rate(s):

Method 5 of 40 CFR Part 60, Appendix A for particulate matter, and
Method 6 of 40 CFR Part 60, Appendix A for sulfur dioxide.

Alternative U.S. EPA approved test methods may be used with prior approval from the Ohio EPA.

d. The test(s) shall be conducted while the emissions unit is operating at or near its maximum capacity, unless otherwise specified or approved by the appropriate Ohio EPA District Office or local air agency. Also, the testing provisions of OAC rule 3745-17-03(B)(9) and OAC rule 3745-18-04(D)(7) shall be met.

Not later than 30 days prior to the proposed test date(s), the permittee shall submit an "Intent to Test" notification to the appropriate Ohio EPA District Office or local air agency. The "Intent to Test" notification shall describe in detail the proposed test methods and procedures, the emissions unit operating parameters, the time(s) and date(s) of the test(s), and the person(s) who will be conducting the test(s). Failure to submit such notification for review and approval prior to the test(s) may result in the Ohio EPA District Office's or local air agency's refusal to accept the results of the emission test(s).

Personnel from the appropriate Ohio EPA District Office or local air agency shall be permitted to witness the test(s), examine the testing equipment, and acquire data and information necessary to ensure that the operation of the emissions unit and the testing procedures provide a valid characterization of the emissions from the emission unit and/or the performance of the control equipment.

A comprehensive written report on the results of the emissions test(s) shall be signed by the person or persons responsible for the tests and submitted to the appropriate Ohio EPA District Office or local air agency within 30 days following completion of the test(s). The permittee may request additional time for the submittal of the written report where warranted, with prior approval from the appropriate Ohio EPA District Office or local air agency.

3. Compliance with the sulfur dioxide emission limitation in section A.I.1. shall be determined by the monitoring and record keeping requirements in A.III.1. and the stack testing requirements in A.V.2.

VI. Miscellaneous Requirements

1. The permittee shall notify this Ohio EPA field office of an intent to burn any fuel other than those listed in this permit. Alternative fuels will be evaluated on a case-by-case basis after the permittee provides written notification to this field office with information sufficient to evaluate the intended change in fuels.

B. State Enforceable Section

I. Applicable Emissions Limitations and/or Control Requirements

1. The specific operation(s), property, and/or equipment which constitute this emissions unit are listed in the following table along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures. Emissions from this unit shall not exceed the listed limitations, and the listed control measures shall be employed. Additional applicable emissions limitations and/or control measures (if any) may be specified in narrative form following the table.

<u>Operations, Property, and/or Equipment</u>	<u>Applicable Rules/ Requirements</u>	<u>Applicable Emissions Limitations/Control Measures</u>
143.6 MMBtu/Hr Coal-fired boiler with ESP (derated to 114.9 MMBtu/Hr)		

2. Additional Terms and Conditions

Part III - Terms and Conditions for Emissions Units

Emissions Unit ID: Boiler #4 (B004)
Activity Description: 73 MMBTU/hr boiler

A. State and Federally Enforceable Section

I. Applicable Emissions Limitations and/or Control Requirements

- The specific operation(s), property, and/or equipment which constitute this emissions unit are listed in the following table along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures. Emissions from this unit shall not exceed the listed limitations, and the listed control measures shall be employed. Additional applicable emissions limitations and/or control measures (if any) may be specified in narrative form following the table.

<u>Operations, Property, and/or Equipment</u>	<u>Applicable Rules/ Requirements</u>	<u>Applicable Emissions Limitations/Control Measures</u>
73 MMBtu/Hr coal-fired boiler with ESP(wood, used grinding oil, and used oil filter cores burned as supplemental fuel)	OAC 3745-17-07 (A)	Visible emissions shall not exceed 20% opacity, as a six-minute average, except as specified by rule.
	OAC 3745-17-10 (C)	Particulate emissions shall not exceed 0.14 lb per MMBtu of actual heat input.
	OAC 3745-18-37 (F)	Sulfur dioxide emissions shall not exceed 2.0 lbs per MMBtu of actual heat input.

2. Additional Terms and Conditions

None

II. Operational Restrictions

- Fuel burning units B001, B003, B004, and B005 are united physically or operationally at this plant. Due to the derated capacity for B003, the total heat input of all fuel burning units united physically or operationally at this plant is reduced from 395.1 MMBtu/hr to 366.4 MMBtu/hr. Based on the total heat input of 366.4 MMBtu/hr, the allowable particulate emissions rate for B004, from Figure I (Curve P-1) of OAC rule 3745-17-10, is 0.14 pound per MMBtu actual heat input.

Note: Pursuant to OAC rule 3745-17-10(B)(3)(d), the derating of B003 shall not revise the federally enforceable requirements of the state implementation plan until approved by the U.S. Environmental Protection Agency. Prior to the derating of B003 and based on the total heat input of 395.1 MMBtu/hr, the allowable particulate emissions rate for B001, from Figure I (Curve P-1) of OAC rule 3745-17-10, is 0.13 pound per MMBtu actual heat input.

- In this emissions unit, the permittee shall not burn municipal solid waste (MSW) as defined in 40 CFR 60.51a. In this emissions unit, the permittee shall burn used oil filter cores that meet the provisions of 40 CFR 261.4(b)(13) and used oil (used grinding fluid) that meets the definition of "used oil" under 40 CFR 279.
- The permittee shall operate the ESP during any operation of this emissions unit, except the ESP may not be operated during periods of start up until the exhaust gases have achieved a temperature of 250 degrees Fahrenheit at the inlet of the ESP or during periods of shutdown when the temperature of the exhaust gases has dropped below 250 degrees Fahrenheit at the inlet of the ESP.

II. Operational Restrictions (continued)

4. The average total combined power input (in kilowatts) to all fields of the ESP, for any 3-hour block of time when the emissions unit is in operation, shall be no less than 90 percent of the total combined power input, as a 3-hour average, during the most recent emissions test that demonstrated the emissions unit was in compliance with the particulate emission limitation.

III. Monitoring and/or Record Keeping Requirements

1. The permittee shall obtain a fuel supplier analysis for each shipment of coal or perform monthly coal composite sampling and analysis in accordance with OAC rule 3745-18-04(D)(8)(c). For the monthly coal composite sample, the permittee shall collect representative grab samples of the coal burned in this emissions unit on a frequency of at least once per week. Each sample shall be collected from the feed conveyor. The coal sampling shall be performed in accordance with ASTM method D2234, Collection of a Gross Sample of Coal, and Method 19 of 40 CFR 60, Appendix A. At the end of each calendar month, all of the grab samples which were collected during that calendar month shall be combined into one composite sample.

As provided in OAC rule 3745-18-04(D)(8)(d), the permittee may obtain a representative coal sample each week from B001, B003, B004, and B005 in lieu of either the coal supplier analysis for each coal shipment or the monthly composite coal sampling specified above.

Each coal supplier shipment or each monthly composite sample of coal from B001 (or each weekly representative coal sample from B001, B003, B004, and B005) shall be analyzed for sulfur content (weight percent) and heat content/gross calorific value (Btu/pound) in accordance with Method 19 of 40 CFR 60, Appendix A.

For each coal supplier analysis or each analyzed sample of coal, the representative sulfur dioxide emission rate shall be calculated using the following formula from OAC rule 3745-18-04(G)(1):

$$ER = (1 \times 10^6) \times S \times 1.95 / H$$

where:

ER = the emission rate in pounds of sulfur dioxide per MM Btu;

H = the heat content of the solid fuel in Btu per pound; and

S = the decimal fraction of sulfur in the solid fuel.

The permittee shall maintain weekly records of the total quantity of coal burned, the results of the analyses for sulfur content and heat content, and the calculated representative sulfur dioxide emission rate for each analysis.

III. Monitoring and/or Record Keeping Requirements (continued)

2. The permittee shall obtain a fuel supplier analysis for each shipment of used grinding oil and each shipment of used oil filter cores or perform monthly fuel composite sampling and analysis in accordance with OAC rule 3745-18-04(E)(3). For the monthly fuel composite sample, the permittee shall collect representative grab samples of the used grinding oil and used oil filters burned in this emissions unit on a frequency of at least once per week. Each sample will be collected from the holding tank.

Each fuel supplier shipment or each on-site composite sample shall be analyzed for density (pounds/gallon), sulfur content (weight percent) and heat content/gross calorific value (Btu/pound) in accordance with Method 19 of 40 CFR 60, Appendix A.

For each fuel supplier analysis or each on-site composite analysis, the representative sulfur dioxide emission rate shall be calculated using the following formula from OAC rule 3745-18-04(G)(2):

$$ER = (1 \times 10^6) \times D \times S \times 1.974 / H$$

where:

ER = the emission rate in pounds of sulfur dioxide per MM Btu;

H = the heat content of the liquid fuel in Btu per gallon;

D = the density of the liquid fuel in pounds per gallon; and

S = the decimal fraction of sulfur in the liquid fuel.

The permittee shall maintain records of the total quantity of used grinding oil and used oil filter cores received and burned each month, the fuel supplier or permittee's analyses for density, sulfur content, and heat content, and the calculated representative sulfur dioxide emission rate for each analysis.

3. The permittee shall maintain records for each shipment of used oil filter cores which document compliance with the requirements of 40 CFR 261.4(b)(13). The permittee shall maintain records for each shipment of used grinding oil which document compliance with the used oil specifications under 40 CFR 279.11.
4. The permittee shall maintain records of the quantity of wood burned per month, in pounds, and the average heat input from the burning of wood (pounds of wood burned multiplied by 5,200 Btu per pound of wood).
5. Monitoring of air emissions control equipment and the boiler shall be performed in accordance with an operation and maintenance plan that is consistent with the manufacturer's recommendations. Records of inspections and maintenance activities for the control equipment and boiler shall be maintained in accordance with a written operations and maintenance plan for the boiler and control equipment.
6. The permittee shall monitor and record the following on an hourly basis during any operation of the ESP:
 - a. the secondary voltage, in kilovolts (kV), and the secondary current in amps, for each transformer rectifier (TR) set in the ESP;
 - b. the power input (in kilowatts) of each TR set for each hour (calculated by multiplying the secondary voltage (in kilovolts) by the secondary current (in amps) for each TR set); and
 - c. the total power input to the ESP for each hour (add together the power inputs for the TR sets operating during the hour).

III. Monitoring and/or Record Keeping Requirements (continued)

7. The permittee shall operate and maintain a temperature monitor and recorder that measures and records the temperature of the boiler exhaust gases entering the ESP as follows:
 - a. during all periods of start up until the ESP is operational or until the inlet temperature of the ESP achieves the temperature level specified in OAC rule 3745-17-07(A)(3)(a)(i); and
 - b. during all periods of shutdown until the inlet temperature to the ESP drops below the temperature level specified in OAC rule 3745-17-07(A)(3)(b)(i).

The temperature monitor and recorder shall be installed, calibrated, operated and maintained in accordance with the manufacturer's recommendations, with any modifications deemed necessary by the permittee, and shall be capable of accurately measuring the temperature of the boiler exhaust gases in degrees Fahrenheit.

8. The permittee shall record the following information for each day:
 - a. all 3-hour blocks of time during which the average total combined power input to the ESP, when the emissions unit was in operation, was less than 90 percent of the total combined power input, as a 3-hour average, during the most recent emissions test that demonstrated the emissions unit was in compliance with the particulate emission limitation; and
 - b. the duration of the downtime for the monitoring equipment specified in section A.III.5 above, the ESP sections that are out of service, and the duration of the downtime for each section, when the associated emissions unit was in operation.

IV. Reporting Requirements

1. The permittee shall submit deviation (excursion) reports which identify all coal supplier analyses and/or all coal sample analyses in which the representative sulfur dioxide emission rate (required in section A.III.1.) exceeded the emission limit specified in section A.I.1. of this permit.
2. The permittee shall submit deviation (excursion) reports which identify all supplier analyses for used grinding oil and used oil filter cores and/or all permittee analyses for on-site samples of used grinding oil and used oil filter cores in which the representative sulfur dioxide emission rate (required in section A.III.2.) exceeded the emission limit specified in section A.I.1. of this permit.
3. The permittee shall submit deviation (excursion) reports which identify all periods of time during start-up and shutdown of the emissions unit when the ESP was not in operation and the temperature of the boiler exhaust gases exceeded the temperature levels specified in OAC rule 3745-17-07(A)(3)(a)(i) and (b)(i).
4. The permittee shall submit deviation (excursion) reports which identify all 3-hour blocks of time during which the average total combined power input to all fields of the ESP does not comply with the operational restriction specified in section A.II.3. of this permit.
5. The permittee shall submit quarterly reports which identify the sections of the ESP that were out of service along with the time period(s) involved. These quarterly reports shall be submitted by January 30, April 30, July 30, and October 30 of each year and shall address the information obtained during the previous calendar quarter.

V. Testing Requirements

1. Compliance with emission limits for visible emissions as established in OAC 3745-17-07(A) shall be demonstrated by methods outlined in OAC 3745-17-03(B)(1).

V. Testing Requirements (continued)

2. The permittee shall conduct, or have conducted, emission testing for this emissions unit in accordance with the following requirements:
 - a. The emission testing shall be conducted within 16 months after issuance of this permit and within 16 months prior to the expiration of this permit.
 - b. The emission testing shall be conducted to demonstrate compliance with the particulate and sulfur dioxide emission limitations in section A.I.1.
 - c. The following test method(s) shall be employed to demonstrate compliance with the allowable mass emission rate(s):

Method 5 of 40 CFR Part 60, Appendix A for particulate matter, and
Method 6 of 40 CFR Part 60, Appendix A for sulfur dioxide.

Alternative U.S. EPA approved test methods may be used with prior approval from the Ohio EPA.

- d. The test(s) shall be conducted while the emissions unit is operating at or near its maximum capacity. The test shall be run while the emissions unit is burning the maximum amount of used grinding oil and used oil filter cores as supplemental fuels. Also, the testing provisions of OAC rule 3745-17-03(B)(9) and OAC rules 3745-18-04(D)(7) and (E)(5) shall be met.

Not later than 30 days prior to the proposed test date(s), the permittee shall submit an "Intent to Test" notification to the appropriate Ohio EPA District Office or local air agency. The "Intent to Test" notification shall describe in detail the proposed test methods and procedures, the emissions unit operating parameters, the time(s) and date(s) of the test(s), and the person(s) who will be conducting the test(s). Failure to submit such notification for review and approval prior to the test(s) may result in the Ohio EPA District Office's or local air agency's refusal to accept the results of the emission test(s).

Personnel from the appropriate Ohio EPA District Office or local air agency shall be permitted to witness the test(s), examine the testing equipment, and acquire data and information necessary to ensure that the operation of the emissions unit and the testing procedures provide a valid characterization of the emissions from the emission unit and/or the performance of the control equipment.

A comprehensive written report on the results of the emissions test(s) shall be signed by the person or persons responsible for the tests and submitted to the appropriate Ohio EPA District Office or local air agency within 30 days following completion of the test(s). The permittee may request additional time for the submittal of the written report where warranted, with prior approval from the appropriate Ohio EPA District Office or local air agency.

3. Compliance with the allowable sulfur dioxide emission rate shall be determined by the monitoring and record keeping requirements in sections A.III.1. and A.III.2. and the stack testing requirements in section A.V.2.

VI. Miscellaneous Requirements

1. The permittee shall notify this Ohio EPA field office of an intent to burn any fuel other than those listed in this permit. Alternative fuels will be evaluated on a case-by-case basis after the permittee provides written notification to this field office with information sufficient to evaluate the intended change in fuels.

B. State Enforceable Section

I. Applicable Emissions Limitations and/or Control Requirements

- The specific operation(s), property, and/or equipment which constitute this emissions unit are listed in the following table along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures. Emissions from this unit shall not exceed the listed limitations, and the listed control measures shall be employed. Additional applicable emissions limitations and/or control measures (if any) may be specified in narrative form following the table.

<u>Operations, Property, and/or Equipment</u>	<u>Applicable Rules/ Requirements</u>	<u>Applicable Emissions Limitations/Control Measures</u>
73 MMBtu/Hr coal-fired boiler with ESP(wood, used grinding oil, and used oil filter cores burned as supplemental fuel)		

2. Additional Terms and Conditions

None

II. Operational Restrictions

- Prior to burning any off-specification used oil (i.e., used grinding oil that doesn't meet the specifications contained in section B.II.2.), the permittee shall ensure that the requirements of subpart G of 40 CFR 279 are met.
- Based on Table 1 of 40 CFR 279.11, the specifications for on-specification used oil are the following:

Used Oil Specification Levels \1\

Constituent/property	Allowable level
Arsenic.....	5 ppm maximum.
Cadmium.....	2 ppm maximum.
Chromium.....	10 ppm maximum.
Lead.....	100 ppm maximum.
Flash point.....	100 deg. F minimum.
Total halogens.....	4,000 ppm maximum.\2\

Note: Applicable standards for the burning of used oil containing PCBs are imposed by 40 CFR 761.20(e).

\1\ The specification does not apply to mixtures of used oil and hazardous waste that continue to be regulated as hazardous waste [see 40 CFR 279.10(b)].

\2\ Used oil containing more than 1,000 ppm total halogens is presumed to be a hazardous waste under the rebuttable presumption provided under 40 CFR 279.10(b)(1). Such used oil is subject to subpart H of 40 CFR 266 rather than 40 CFR 279 when burned for energy recovery unless the presumption of mixing can be successfully rebutted.

3. Other Regulatory Requirements Concerning Disposal or Recycling of Used Oil

In accordance with OAC rule 3745-31-05(A)(2), the permittee shall comply with all applicable laws as defined in OAC rule 3745-31-01(F). Therefore, this permit cannot exempt the permittee from any current or future regulations regarding the disposal or recycling of used oil, as they relate to this emissions unit.

III. Monitoring and/or Record Keeping Requirements

1. For each shipment of used oil filter cores and used grinding oil, the supplier or the permittee shall collect a representative sample of the used oil filter cores (decanted oil) and used grinding oil, respectively, and obtain an analysis of the sample by an independent laboratory for the following:
 - a. quantity of decanted used oil received for analysis;
 - b. arsenic content;
 - c. cadmium content;
 - d. chromium content;
 - e. lead content;
 - f. PCB content;
 - g. total halogen content, and
 - h. heat content.

The testing procedures for arsenic, cadmium, chromium, lead, total halogens are contained in EPA publication SW-846 "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" (Third Edition) that was last amended in December 1996. The testing procedures for determining flash point are in ASTM D-3278-78, ASTM D-93-79, ASTM D-93-80, ASTM D-3278-89, or ASTM D-93-90. The testing procedures for PCB content of used oil are specified under 40 CFR 761.20(e)(2), 40 CFR 761.60(g)(2), and 40 CFR 761.60(g)(1)(iii).

IV. Reporting Requirements

1. The permittee shall notify the Ohio EPA if any of the used oil doesn't meet the used oil specifications of section B.II.2 within 30 days after becoming aware of such results. An identification number from USEPA shall be obtained prior to the combustion of any off-specification used oil within this boiler.

V. Testing Requirements

1. Compliance with the used oil specifications of B.II.2. shall be demonstrated by the recordkeeping and reporting requirements in sections B.III. and B.IV. of these terms and conditions.

VI. Miscellaneous Requirements

None

Part III - Terms and Conditions for Emissions Units

Emissions Unit ID: Boiler #3 (B005)
Activity Description: 105.5 MMBTU boiler

A. State and Federally Enforceable Section

I. Applicable Emissions Limitations and/or Control Requirements

- The specific operation(s), property, and/or equipment which constitute this emissions unit are listed in the following table along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures. Emissions from this unit shall not exceed the listed limitations, and the listed control measures shall be employed. Additional applicable emissions limitations and/or control measures (if any) may be specified in narrative form following the table.

<u>Operations, Property, and/or Equipment</u>	<u>Applicable Rules/ Requirements</u>	<u>Applicable Emissions Limitations/Control Measures</u>
105.5 MMBtu/Hr coal-fired boiler with ESP(wood, used grinding oil, and used oil filter cores burned as supplemental fuel)	OAC 3745-17-07 (A)	Visible emissions shall not exceed 20% opacity, as a six-minute average, except as specified by rule.
	OAC 3745-17-10 (C)	Particulate emissions shall not exceed 0.14 lb per MMBtu of actual heat input.
	OAC 3745-18-37 (F)	Sulfur dioxide emissions shall not exceed 2.0 lbs per MMBtu of actual heat input.

2. Additional Terms and Conditions

None

II. Operational Restrictions

- Fuel burning units B001, B003, B004, and B005 are united physically or operationally at this plant. Due to the derated capacity for B003, the total heat input of all fuel burning units united physically or operationally at this plant is reduced from 395.1 MMBtu/hr to 366.4 MMBtu/hr. Based on the total heat input of 366.4 MMBtu/hr, the allowable particulate emissions rate for B005, from Figure I (Curve P-1) of OAC rule 3745-17-10, is 0.14 pound per MMBtu actual heat input.

Note: Pursuant to OAC rule 3745-17-10(B)(3)(d), the derating of B003 shall not revise the federally enforceable requirements of the state implementation plan until approved by the U.S. Environmental Protection Agency. Prior to the derating of B003 and based on the total heat input of 395.1 MMBtu/hr, the allowable particulate emissions rate for B001, from Figure I (Curve P-1) of OAC rule 3745-17-10, is 0.13 pound per MMBtu actual heat input.

- In this emissions unit, the permittee shall not burn municipal solid waste (MSW) as defined in 40 CFR 60.51a. In this emissions unit, the permittee shall burn used oil filter cores that meet the provisions of 40 CFR 261.4(b)(13) and used oil (used grinding fluid) that meets the definition of "used oil" under 40 CFR 279.
- The permittee shall operate the ESP during any operation of this emissions unit, except the ESP may not be operated during periods of start up until the exhaust gases have achieved a temperature of 250 degrees Fahrenheit at the inlet of the ESP or during periods of shutdown when the temperature of the exhaust gases has dropped below 250 degrees Fahrenheit at the inlet of the ESP.

II. Operational Restrictions (continued)

4. The average total combined power input (in kilowatts) to all fields of the ESP, for any 3-hour block of time when the emissions unit is in operation, shall be no less than 90 percent of the total combined power input, as a 3-hour average, during the most recent emissions test that demonstrated the emissions unit was in compliance with the particulate emission limitation.

III. Monitoring and/or Record Keeping Requirements

1. The permittee shall collect weekly, as-fired samples of the coal burned in this emissions unit. Each sample shall be collected from the feed conveyor. The coal sampling shall be performed in accordance with ASTM method D2234, Collection of a Gross Sample of Coal, and Method 19 of 40 CFR 60, Appendix A.

As provided in OAC rule 3745-18-04(D)(8)(d), the permittee may obtain a representative coal sample each week from B001, B003, B004, and B005 in lieu of the weekly coal sampling specified above.

Each weekly sample of coal shall be analyzed for sulfur content (weight percent) and heat content/gross calorific value (Btu/pound) in accordance with Method 19 of 40 CFR 60, Appendix A.

For each analyzed sample of coal, the representative sulfur dioxide emission rate shall be calculated using the following formula from OAC rule 3745-18-04(G)(1):

$$ER = (1 \times 10^6) \times S \times 1.95 / H$$

where:

ER = the emission rate in pounds of sulfur dioxide per MM Btu;

H = the heat content of the solid fuel in Btu per pound; and

S = the decimal fraction of sulfur in the solid fuel.

The permittee shall maintain weekly records of the total quantity of coal burned, the results of the analyses for sulfur content and heat content, and the calculated representative sulfur dioxide emission rate.

III. Monitoring and/or Record Keeping Requirements (continued)

2. The permittee shall obtain a fuel supplier analysis for each shipment of used grinding oil and each shipment of used oil filter cores or perform monthly fuel composite sampling and analysis in accordance with OAC rule 3745-18-04(E)(3). For the monthly fuel composite sample, the permittee shall collect representative grab samples of the used grinding oil and used oil filters burned in this emissions unit on a frequency of at least once per week. Each sample will be collected from the holding tank.

Each fuel supplier shipment or each on-site composite sample shall be analyzed for density (pounds/gallon), sulfur content (weight percent) and heat content/gross calorific value (Btu/pound) in accordance with Method 19 of 40 CFR 60, Appendix A.

For each fuel supplier analysis or each on-site composite analysis, the representative sulfur dioxide emission rate shall be calculated using the following formula from OAC rule 3745-18-04(G)(2):

$$ER = (1 \times 10^6) \times D \times S \times 1.974 / H$$

where:

ER = the emission rate in pounds of sulfur dioxide per MM Btu;

H = the heat content of the liquid fuel in Btu per gallon;

D = the density of the liquid fuel in pounds per gallon; and

S = the decimal fraction of sulfur in the liquid fuel.

The permittee shall maintain records of the total quantity of used grinding oil and used oil filter cores received and burned each month, the fuel supplier or permittee's analyses for density, sulfur content, and heat content, and the calculated representative sulfur dioxide emission rate for each analysis.

3. The permittee shall maintain records for each shipment of used oil filter cores which document compliance with the requirements of 40 CFR 261.4(b)(13). The permittee shall maintain records for each shipment of used grinding oil which document compliance with the used oil specifications under 40 CFR 279.11.
4. The permittee shall maintain records of the quantity of wood burned per month, in pounds, and the average heat input from the burning of wood (pounds of wood burned multiplied by 5,200 Btu per pound of wood).
5. Monitoring of air emissions control equipment and the boiler shall be performed in accordance with an operation and maintenance plan that is consistent with the manufacturer's recommendations. Records of inspections and maintenance activities for the control equipment and boiler shall be maintained in accordance with a written operations and maintenance plan for the boiler and control equipment.
6. The permittee shall monitor and record the following on an hourly basis during any operation of the ESP:
 - a. the secondary voltage, in kilovolts (kV), and the secondary current in amps, for each transformer rectifier (TR) set in the ESP;
 - b. the power input (in kilowatts) of each TR set for each hour (calculated by multiplying the secondary voltage (in kilovolts) by the secondary current (in amps) for each TR set); and
 - c. the total power input to the ESP for each hour (add together the power inputs for the TR sets operating during the hour).

III. Monitoring and/or Record Keeping Requirements (continued)

7. The permittee shall operate and maintain a temperature monitor and recorder that measures and records the temperature of the boiler exhaust gases entering the ESP as follows:
 - a. during all periods of start up until the ESP is operational or until the inlet temperature of the ESP achieves the temperature level specified in OAC rule 3745-17-07(A)(3)(a)(i); and
 - b. during all periods of shutdown until the inlet temperature to the ESP drops below the temperature level specified in OAC rule 3745-17-07(A)(3)(b)(i).

The temperature monitor and recorder shall be installed, calibrated, operated and maintained in accordance with the manufacturer's recommendations, with any modifications deemed necessary by the permittee, and shall be capable of accurately measuring the temperature of the boiler exhaust gases in degrees Fahrenheit.

8. The permittee shall record the following information for each day:
 - a. all 3-hour blocks of time during which the average total combined power input to the ESP, when the emissions unit was in operation, was less than 90 percent of the total combined power input, as a 3-hour average, during the most recent emissions test that demonstrated the emissions unit was in compliance with the particulate emission limitation; and
 - b. the duration of the downtime for the monitoring equipment specified in section A.III.5 above, the ESP sections that are out of service, and the duration of the downtime for each section, when the associated emissions unit was in operation.

IV. Reporting Requirements

1. The permittee shall submit deviation (excursion) reports which identify all weekly coal samples in which the representative sulfur dioxide emission rate exceeded the emission limit specified in section A.I.1. of this permit.
2. The permittee shall submit deviation (excursion) reports which identify all supplier analyses for used grinding oil and used oil filter cores and/or all permittee analyses for on-site samples of used grinding oil and used oil filter cores in which the representative sulfur dioxide emission rate (required in section A.III.2.) exceeded the emission limit specified in section A.I.1. of this permit.
3. The permittee shall submit deviation (excursion) reports which identify all periods of time during start-up and shutdown of the emissions unit when the ESP was not in operation and the temperature of the boiler exhaust gases exceeded the temperature levels specified in OAC rule 3745-17-07(A)(3)(a)(i) and (b)(i).
4. The permittee shall submit deviation (excursion) reports which identify all 3-hour blocks of time during which the average total combined power input to all fields of the ESP does not comply with the operational restriction specified in section A.II.3. of this permit.
5. The permittee shall submit quarterly reports which identify the sections of the ESP that were out of service along with the time period(s) involved. These quarterly reports shall be submitted by January 30, April 30, July 30, and October 30 of each year and shall address the information obtained during the previous calendar quarter.

V. Testing Requirements

1. Compliance with emission limits for visible emissions as established in OAC 3745-17-07(A) shall be demonstrated by methods outlined in OAC 3745-17-03(B)(1).

V. Testing Requirements (continued)

2. The permittee shall conduct, or have conducted, emission testing for this emissions unit in accordance with the following requirements:
 - a. The emission testing shall be conducted within 16 months after issuance of this permit and within 16 months prior to the expiration of this permit.
 - b. The emission testing shall be conducted to demonstrate compliance with the particulate and sulfur dioxide emission limitations in section A.I.1.
 - c. The following test method(s) shall be employed to demonstrate compliance with the allowable mass emission rate(s):

Method 5 of 40 CFR Part 60, Appendix A for particulate matter, and
Method 6 of 40 CFR Part 60, Appendix A for sulfur dioxide.

Alternative U.S. EPA approved test methods may be used with prior approval from the Ohio EPA.

- d. The test(s) shall be conducted while the emissions unit is operating at or near its maximum capacity. The test shall be run while the emissions unit is burning the maximum amount of used grinding oil and used oil filter cores as supplemental fuels. Also, the testing provisions of OAC rule 3745-17-03(B)(9) and OAC rules 3745-18-04(D)(7) and (E)(5) shall be met.

Not later than 30 days prior to the proposed test date(s), the permittee shall submit an "Intent to Test" notification to the appropriate Ohio EPA District Office or local air agency. The "Intent to Test" notification shall describe in detail the proposed test methods and procedures, the emissions unit operating parameters, the time(s) and date(s) of the test(s), and the person(s) who will be conducting the test(s). Failure to submit such notification for review and approval prior to the test(s) may result in the Ohio EPA District Office's or local air agency's refusal to accept the results of the emission test(s).

Personnel from the appropriate Ohio EPA District Office or local air agency shall be permitted to witness the test(s), examine the testing equipment, and acquire data and information necessary to ensure that the operation of the emissions unit and the testing procedures provide a valid characterization of the emissions from the emission unit and/or the performance of the control equipment.

A comprehensive written report on the results of the emissions test(s) shall be signed by the person or persons responsible for the tests and submitted to the appropriate Ohio EPA District Office or local air agency within 30 days following completion of the test(s). The permittee may request additional time for the submittal of the written report where warranted, with prior approval from the appropriate Ohio EPA District Office or local air agency.

3. Compliance with the allowable sulfur dioxide emission rate shall be determined by the monitoring and record keeping requirements in sections A.III.1. and A.III.2. and the stack testing requirements in section A.V.2.

VI. Miscellaneous Requirements

1. The permittee shall notify this Ohio EPA field office of an intent to burn any fuel other than those listed in this permit. Alternative fuels will be evaluated on a case-by-case basis after the permittee provides written notification to this field office with information sufficient to evaluate the intended change in fuels.

B. State Enforceable Section

I. Applicable Emissions Limitations and/or Control Requirements

- The specific operation(s), property, and/or equipment which constitute this emissions unit are listed in the following table along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures. Emissions from this unit shall not exceed the listed limitations, and the listed control measures shall be employed. Additional applicable emissions limitations and/or control measures (if any) may be specified in narrative form following the table.

<u>Operations, Property, and/or Equipment</u>	<u>Applicable Rules/ Requirements</u>	<u>Applicable Emissions Limitations/Control Measures</u>
105.5 MMBtu/Hr coal-fired boiler with ESP(wood, used grinding oil, and used oil filter cores burned as supplemental fuel)		

2. Additional Terms and Conditions

None

II. Operational Restrictions

- Prior to burning any off-specification used oil (i.e., used grinding oil that doesn't meet the specifications contained in section B.II.2.), the permittee shall ensure that the requirements of subpart G of 40 CFR 279 are met.
- Based on Table 1 of 40 CFR 279.11, the specifications for on-specification used oil are the following:

Used Oil Specification Levels \1\

Constituent/property	Allowable level
Arsenic.....	5 ppm maximum.
Cadmium.....	2 ppm maximum.
Chromium.....	10 ppm maximum.
Lead.....	100 ppm maximum.
Flash point.....	100 deg. F minimum.
Total halogens.....	4,000 ppm maximum.\2\ -----

Note: Applicable standards for the burning of used oil containing PCBs are imposed by 40 CFR 761.20(e).

 \1\ The specification does not apply to mixtures of used oil and hazardous waste that continue to be regulated as hazardous waste [see 40 CFR 279.10(b)].
 \2\ Used oil containing more than 1,000 ppm total halogens is presumed to be a hazardous waste under the rebuttable presumption provided under 40 CFR 279.10(b)(1). Such used oil is subject to subpart H of 40 CFR 266 rather than 40 CFR 279 when burned for energy recovery unless the presumption of mixing can be successfully rebutted.

3. Other Regulatory Requirements Concerning Disposal or Recycling of Used Oil

In accordance with OAC rule 3745-31-05(A)(2), the permittee shall comply with all applicable laws as defined in OAC rule 3745-31-01(F). Therefore, this permit cannot exempt the permittee from any current or future regulations regarding the disposal or recycling of used oil, as they relate to this emissions unit.

III. Monitoring and/or Record Keeping Requirements

1. For each shipment of used oil filter cores and used grinding oil, the supplier or the permittee shall collect a representative sample of the used oil filter cores (decanted oil) and used grinding oil, respectively, and obtain an analysis of the sample by an independent laboratory for the following:
 - a. quantity of decanted used oil received for analysis;
 - b. arsenic content;
 - c. cadmium content;
 - d. chromium content;
 - e. lead content;
 - f. PCB content;
 - g. total halogen content, and
 - h. heat content.

The testing procedures for arsenic, cadmium, chromium, lead, total halogens are contained in EPA publication SW-846 "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" (Third Edition) that was last amended in December 1996. The testing procedures for determining flash point are in ASTM D-3278-78, ASTM D-93-79, ASTM D-93-80, ASTM D-3278-89, or ASTM D-93-90. The testing procedures for PCB content of used oil are specified under 40 CFR 761.20(e)(2), 40 CFR 761.60(g)(2), and 40 CFR 761.60(g)(1)(iii).

IV. Reporting Requirements

1. The permittee shall notify the Ohio EPA if any of the used oil doesn't meet the used oil specifications of section B.II.2 within 30 days after becoming aware of such results. An identification number from USEPA shall be obtained prior to the combustion of any off-specification used oil within this boiler.

V. Testing Requirements

1. Compliance with the used oil specifications of B.II.2. shall be demonstrated by the recordkeeping and reporting requirements in sections B.III. and B.IV. of these terms and conditions.

VI. Miscellaneous Requirements

None

THIS IS THE LAST PAGE OF THE PERMIT
