Georgia-Pacific Corporation
Jay Metzger
3265 Gilchrist Road
Mogadore, OH 44260

You are hereby notified that the Ohio Environmental Protection Agency has made a draft action recommending that the Director issue a Permit to Install for the air contaminant source(s) [emissions unit(s)] shown on the enclosed draft permit. This draft action is not an authorization to begin construction or modification of your emissions unit(s). The purpose of this draft is to solicit public comments on the proposed installation. A public notice concerning the draft permit will appear in the Ohio EPA Weekly Review and the newspaper in the county where the facility will be located. Public comments will be accepted by the field office within 30 days of the date of publication in the newspaper. Any comments you have on the draft permit should be directed to the appropriate field office within the comment period. A copy of your comments should also be mailed to Robert Hodanbosi, Division of Air Pollution Control, Ohio EPA, P.O. Box 1049, Columbus, OH, 43266-0149.

A Permit to Install may be issued in proposed or final form based on the draft action, any written public comments received within 30 days of the public notice, or record of a public meeting if one is held. You will be notified in writing of a scheduled public meeting. Upon issuance of a final Permit to Install a fee of **\$400** will be due. Please do not submit any payment now.

The Ohio EPA is urging companies to investigate pollution prevention and energy conservation. Not only will this reduce pollution and energy consumption, but it can also save you money. If you would like to learn ways you can save money while protecting the environment, please contact our Office of Pollution Prevention at (614) 644-3469. If you have any questions about this draft permit, please contact the field office where you submitted your application, or Mike Ahern, Field Operations & Permit Section at (614) 644-3631.

Very truly yours,

Thomas G. Rigo, Manager
Field Operations and Permit Section
Division of Air Pollution Control

DRAFT PERMIT TO INSTALL 16-1959

Application Number: 16-1959

APS Premise Number: 1677150028

Permit Fee: **To be entered upon final issuance**

Name of Facility: Georgia-Pacific Corporation

Person to Contact: Jay Metzger

Address: 3265 Gilchrist Road
Mogadore, OH 44260

Location of proposed air contaminant source(s) [emissions unit(s)]:

**3265 Gilchrist Road
Mogadore, Ohio**

Description of proposed emissions unit(s):

FLEXOGRAPHIC PRINTER/SLOTTER AND LAMINATOR.

The above named entity is hereby granted a Permit to Install for the above described emissions unit(s) pursuant to Chapter 3745-31 of the Ohio Administrative Code. Issuance of this permit does not constitute expressed or implied approval or agreement that, if constructed or modified in accordance with the plans included in the application, the above described emissions unit(s) of environmental pollutants will operate in compliance with applicable State and Federal laws and regulations, and does not constitute expressed or implied assurance that if constructed or modified in accordance with those plans and specifications, the above described emissions unit(s) of pollutants will be granted the necessary permits to operate (air) or NPDES permits as applicable.

This permit is granted subject to the conditions attached hereto.

Ohio Environmental Protection Agency

Director

Part I - GENERAL TERMS AND CONDITIONS

A. Permit to Install General Terms and Conditions

1. Compliance Requirements

The emissions unit(s) identified in this Permit to Install shall remain in full compliance with all applicable State laws and regulations and the terms and conditions of this permit.

2. Reporting Requirements Related to Monitoring and Recordkeeping Requirements

The permittee shall submit required reports in the following manner:

- a. Reports of any required monitoring and/or recordkeeping information shall be submitted to the appropriate Ohio EPA District Office or local air agency.
- b. Except as otherwise may be provided in the terms and conditions for a specific emissions unit, quarterly written reports of (a) any deviations (excursions) from emission limitations, operational restrictions, and control device operating parameter limitations that have been detected by the testing, monitoring, and recordkeeping requirements specified in this permit, (b) the probable cause of such deviations, and (c) any corrective actions or preventive measures which have been or will be taken, shall be submitted to the appropriate Ohio EPA District Office or local air agency. If no deviations occurred during a calendar quarter, the permittee shall submit a quarterly report, which states that no deviations occurred during that quarter. The reports shall be submitted quarterly, i.e., by January 31, April 30, July 31, and October 31 of each year and shall cover the previous calendar quarters. (These quarterly reports shall exclude deviations resulting from malfunctions reported in accordance with OAC rule 3745-15-06.)

3. Records Retention Requirements

Each record of any monitoring data, testing data, and support information required pursuant to this permit shall be retained for a period of five years from the date the record was created. Support information shall include, but not be limited to, all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by this permit. Such records may be maintained in computerized form.

4. Inspections and Information Requests

The Director of the Ohio EPA, or an authorized representative of the Director, may, subject to the safety requirements of the permittee and without undue delay, enter upon the premises of this source at any reasonable time for purposes of making inspections, conducting tests, examining records or reports pertaining to any emission of air contaminants, and determining compliance with any applicable State air pollution laws and regulations and the terms and conditions of this permit. The permittee shall furnish to the Director of the Ohio EPA, or an authorized representative of the Director, upon receipt of a written request and within a reasonable time, any information that may

be requested to determine whether cause exists for modifying, reopening or revoking this permit or to determine compliance with this permit. Upon verbal or written request, the permittee shall also furnish to the Director of the Ohio EPA, or an authorized representative of the Director, copies of records required to be kept by this permit.

5. Scheduled Maintenance/Malfunction Reporting

Any scheduled maintenance of air pollution control equipment shall be performed in accordance with paragraph (A) of OAC rule 3745-15-06. The malfunction of any emissions units or any associated air pollution control system(s) shall be reported to the appropriate Ohio EPA District Office or local air agency in accordance with paragraph (B) of OAC rule 3745-15-06. Except as provided in that rule, any scheduled maintenance or malfunction necessitating the shutdown or bypassing of any air pollution control system(s) shall be accompanied by the shutdown of the emissions unit(s) that is (are) served by such control system(s).

6. Permit Transfers

Any transferee of this permit shall assume the responsibilities of the prior permit holder. The appropriate Ohio EPA District Office or local air agency must be notified in writing of any transfer of this permit.

7. Air Pollution Nuisance

The air contaminants emitted by the emissions units covered by this permit shall not cause a public nuisance, in violation of OAC rule 3745-15-07.

8. Termination of Permit to Install

This Permit to Install shall terminate within eighteen months of the effective date of the Permit to Install if the owner or operator has not undertaken a continuing program of installation or modification or has not entered into a binding contractual obligation to undertake and complete within a reasonable time a continuing program of installation or modification. This deadline may be extended by up to 12 months if application is made to the Director within a reasonable time before the termination date and the party shows good cause for any such extension.

9. Construction of New Sources(s)

The proposed emissions unit(s) shall be constructed in strict accordance with the plans and application submitted for this permit to the Director of the Ohio Environmental Protection Agency. There may be no deviation from the approved plans without the express, written approval of the Agency. Any deviations from the approved plans or the above conditions may lead to such sanctions and penalties as provided under Ohio law. Approval of these plans does not constitute an assurance that the proposed facilities will operate in compliance with all Ohio laws and regulations. Additional facilities shall be installed upon orders of the Ohio Environmental Protection Agency if the proposed sources are inadequate or cannot meet applicable standards.

If the construction of the proposed emissions unit(s) has already begun or has been completed prior to the date the Director of the Environmental Protection Agency approves the permit application and plans, the approval does not constitute expressed or implied assurance that the proposed facility has been constructed in accordance with the approved plans. The action of beginning and/or completing construction prior to obtaining the Director's approval constitutes a violation of OAC rule 3745-31-02. Furthermore, issuance of the Permit to Install does not constitute an assurance that the proposed source will operate in compliance with all Ohio laws and regulations. Approval of the plans in any case is not to be construed as an approval of the facility as constructed and/or completed. Moreover, issuance of the Permit to Install is not to be construed as a waiver of any rights that the Ohio Environmental Protection Agency (or other persons) may have against the applicant for starting construction prior to the effective date of the permit. Additional facilities shall be installed upon orders of the Ohio Environmental Protection Agency if the proposed facilities prove to be inadequate or cannot meet applicable standards.

10. Public Disclosure

The facility is hereby notified that this permit, and all agency records concerning the operation of this permitted source, are subject to public disclosure in accordance with OAC rule 3745-49-03.

11. Applicability

This Permit to Install is applicable only to the emissions unit(s) identified in the Permit to Install. Separate application must be made to the Director for the installation or modification of any other emissions unit(s).

12. Best Available Technology

As specified in OAC Rule 3745-31-05, all new sources must employ Best Available Technology (BAT). Compliance with the terms and conditions of this permit will fulfill this requirement.

13. Source Operation and Operating Permit Requirements After Completion of Construction

This facility is permitted to operate each source described by this Permit to Install for a period of up to one year from the date the source commenced operation. This permission to operate is granted only if the facility complies with all requirements contained in this permit and all applicable air pollution laws, regulations, and policies. Pursuant to OAC Chapter 3745-35, the permittee shall submit a complete operating permit application within thirty (30) days after commencing operation of the emissions unit(s) covered by this permit.

14. Construction Compliance Certification

The applicant shall provide Ohio EPA with a written certification (see enclosed form) that the facility has been constructed in accordance with the Permit to Install application and the terms and conditions of the Permit to Install. The certification shall be provided to Ohio EPA upon completion of construction but prior to startup of the source.

15. Fees

The permittee shall pay fees to the Director of the Ohio EPA in accordance with ORC section 3745.11 and OAC Chapter 3745-78. The permittee shall pay all applicable Permit to Install fees within 30 days after the issuance of this Permit to Install.

B. Permit to Install Summary of Allowable Emissions

The following information summarizes the total allowable emissions, by pollutant, based on the individual allowable emissions of each air contaminant source identified in this permit.

**SUMMARY (for informational purposes only)
TOTAL PERMIT TO INSTALL ALLOWABLE EMISSIONS**

<u>Pollutant</u>	<u>Tons Per Year</u>
VOC and OC*	95.0
Individual HAP*	9.0
All HAPs*	24.0

PART II - SPECIAL TERMS AND CONDITIONS FOR SPECIFIC EMISSIONS UNIT(S)

A. Applicable Emissions Limitations and/or Control Requirements

1. The specific operations(s), property, and/or equipment which constitute this emissions unit are listed in the following table along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures. Emissions from this unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

<u>Operations, Property, and/or Equipment</u>	<u>Applicable Rules/Requirements</u>	<u>Applicable Emissions Limitations/Control Measures</u>
F & E Press #112 - 66" Flexographic Printer/Slotter	OAC rule 3745-31-05(A)(3)	2.32 pounds of volatile organic compounds (VOC) per hour for coatings
	OAC rule 3745-31-05(D)	Combined annual emissions from all facility emissions units shall not exceed the following as rolling, 12-month summations: 95.0 tons of VOC and OC; 24.0 tons of all hazardous air pollutants (HAPs); and 9.0 tons of any individual HAP.
	OAC rule 3745-21-09(Y)	See A.2.a below.
	40 CFR Part 63, Subpart KK	See A.2.b below. See D.5 below.

2. Additional Terms and Conditions

- 2.a The emissions of volatile organic compounds (VOC) and organic compounds (OC), individual Hazardous Air Pollutant (HAP), and combined HAPs from this facility which consists of emissions units K001, K002, K003, K004, K005, K006, K007, K008, K009, and P001 shall not exceed 95.0, 9.0, and 24.0 tons per year, respectively, based upon a rolling, 12-month summation of the monthly emissions. The cumulative emissions table is not necessary because the permittee has sufficient records to demonstrate compliance with the rolling 12-month emissions limitation for the past 12 months.

2.b The volatile organic compound (VOC) content of the coatings and inks employed in this printing line shall not exceed the following limitations:

- i. forty per cent VOC by volume of coating and ink, excluding water; or,
- ii. twenty-five per cent VOC by volume of the volatile matter in the coating and ink.

B. Operational Restrictions

None.

C. Monitoring and/or Recordkeeping Requirements

- 1. In order to demonstrate compliance with the facility-wide emission limitations, the permittee shall maintain monthly records which contain the following information:
 - a. the name and company identification of each ink, coating, and cleanup material, as applied;
 - b. Material Safety Data Sheets from the supplier that list the VOC content of each ink, coating, and cleanup material, as applied, in pounds per gallon;
 - c. the number of gallons of each ink, coating, and cleanup material, as applied;
 - d. Material Safety Data Sheets from the supplier that list the percent, by weight, of each HAP for each ink, coating, and cleanup material; and,
 - e. the VOC content in percentage VOC by volume of each coating and ink, excluding water and exempt solvents, or the VOC content in percentage VOC by volume of the volatile matter in each coating and ink.
- 2. The permittee shall, on a monthly basis, calculate and record for the entire facility which consists of emissions units K001, K002, K003, K004, K005, K006, K007, K008, K009, and P001 the individual HAP, combined HAP, and VOC and OC emission rates, in tons per month, and in tons per rolling, 12-month period.

These mass emissions shall be calculated in accordance with the following methodology:

Facility individual HAP

summation of the pounds of each ink, coating, and cleanup material multiplied by the individual HAP content, in weight percent, for each individual HAP

Facility combined HAP

summation of all individual HAPs from the facility calculation

Facility VOC and OC emissions

summation of the gallons of each ink, coating, and cleanup material multiplied by the VOC content, in pounds/gallon

3. The permittee shall collect and record the following information each month for this emissions unit:
 - a. the number of hours the emissions unit was in operation;
 - b. the production of the emissions unit in thousand square feet (msf); and,
 - c. the calculated hourly VOC emission rate, in pounds per hour (average)(line specific emissions are based on a production ratio multiplied times the facility-wide total VOC emissions).

The VOC emission rate shall be calculated in accordance with the following methodology:

Divide the production for each line, in msf, by the total production for the entire facility for the month, in msf, to obtain a production ratio for the line. Multiply the production ratio for the line by the total VOC emissions for the month (from C.2) to obtain the pounds of VOC per month per line. Divide the result by the hours of operation for the month for the line to obtain the average hourly VOC emission rate for the line.

4. The permittee shall collect and record the following information for each change where the air toxic modeling was required pursuant to the Air Toxic Policy:
 - a. background data that describes the parameters changed (composition of materials, new pollutants emitted, change in stack/exhaust parameters, etc.); and,
 - b. a copy of the resulting computer model runs that show the results of the application of the Air Toxic Policy for the change.

D. Reporting Requirements

1. The permittee shall submit deviation (excursion) reports which identify all exceedances of the rolling, 12-month facility emission limitations for VOC and OC, individual HAP, and combined HAP.
2. The permittee shall submit deviation (excursion) reports which identify any monthly record showing the use of noncomplying coatings or inks unless the daily record shows that the daily volume-weighted average VOC content of all coatings and inks employed on that day does not exceed the applicable emission limitation. The notification shall include a copy of such record and shall be sent to the Director (Akron Regional Air Quality Management) within 45 days after the exceedance occurs.
3. The permittee shall submit deviation (excursion) reports which include any record showing an exceedance of the hourly allowable mass emission rate for VOC.

4. The deviation reports shall be submitted in accordance with the requirements specified in General Term and Condition 3.
5. The permittee shall submit an initial notification no later than 120 days after initial startup, as required in 40 CFR Part 63, Subpart KK.

E. Testing Requirements

1. Compliance with the emission limitations in Section A.1 of these terms and conditions shall be determined in accordance with the following methods:

a. Emission Limitation:

2.32 lbs/hr of VOC

Applicable Compliance Method:

The permittee shall demonstrate compliance with the above limit based upon the record keeping requirements of Section C.3 of these terms and conditions.

USEPA Methods 24 and 24A shall be used to determine the VOC content for coatings, flexographic and rotogravure printing inks, and related coatings, respectively. If, pursuant to Section 4.3 of Method 24, 40 CFR Part 60, Appendix A, a permittee determines that Method 24 or 24A cannot be used for a particular coating or ink, the permittee shall so notify the Administrator of the USEPA and shall use formulation data for that coating or ink to demonstrate compliance until the USEPA provides alternative analytical procedures or alternative precision statements for Method 24 or 24A.

b. Emission Limitation:

95.0 TPY VOC and OC, facility-wide

Applicable Compliance Method:

The permittee shall demonstrate compliance with the above limit based upon the record keeping requirements of Sections C.1 and C.2 of these terms and conditions.

USEPA Methods 24 and 24A shall be used to determine the VOC content for coatings, flexographic and rotogravure printing inks, and related coatings, respectively. If, pursuant to Section 4.3 of Method 24, 40 CFR Part 60, Appendix A, a permittee determines that Method 24 or 24A cannot be used for a particular coating or ink, the permittee shall so notify the Administrator of the USEPA and shall use formulation data for that coating or ink to demonstrate compliance until the USEPA provides alternative analytical procedures or alternative precision statements for Method 24 or 24A. Formulation data shall be used to determine the VOC content of each cleanup material.

c. Emission Limitation:

24.0 TPY all HAPs, facility-wide

Applicable Compliance Method:

The permittee shall demonstrate compliance with the above limit based upon the record keeping requirements of Sections C.1 and C.2 of these terms and conditions.

Formulation data shall be used to determine the HAP content for coatings, flexographic and rotogravure printing inks, cleanup materials, and related coatings, respectively.

d. Emission Limitation:

9.0 TPY any individual HAP, facility-wide

Applicable Compliance Method:

The permittee shall demonstrate compliance with the above limit based upon the record keeping requirements of Sections C.1 and C.2 of these terms and conditions.

Formulation data shall be used to determine the HAP content for coatings, flexographic and rotogravure printing inks, cleanup materials, and related coatings, respectively.

e. Emission Limitation:

forty per cent VOC by volume of the coating and ink, excluding water or twenty-five per cent VOC by volume of the volatile matter in the coating and ink

Applicable Compliance Method:

The permittee shall demonstrate compliance with the above limit based upon the record keeping requirements of Section C.4 of these terms and conditions.

OAC rule 3745-21-10(B). USEPA Methods 24 and 24A shall be used to determine the VOC contents for (a) coatings and (b) flexographic and rotogravure printing inks and related coatings, respectively. If, pursuant to section 4.3 of Method 24, 40 CFR Part 60, Appendix A, the permittee determines that Method 24 or 24A cannot be used for a particular coating or ink, the permittee shall so notify the Administrator of the USEPA and shall use formulation data for that coating or ink to demonstrate compliance until the USEPA provides alternative analytical procedures or alternative precision statements for Method 24 or 24A.

F. Miscellaneous Requirements

1. This permit allows the use of materials (typically coatings and cleanup materials) specified by the permittee in the permit to install application for this emissions unit. To fulfill the best available technology requirements of (OAC) rule 3745-31-05 and to ensure compliance with OAC rule 3745-15-07 (Air Pollution Nuisances Prohibited), the emission limitation(s) specified in this permit was (were) established using the Ohio EPA's "Air Toxic Policy" and is (are) based on both the materials

used and the design parameters of the emissions unit's exhaust system, as specified in the application. The Ohio EPA's "Air Toxic Policy" was applied for each pollutant using the SCREEN 3.0 model and comparing the predicted 1-hour maximum ground-level concentration to the Maximum Acceptable Ground-Level Concentration (MAGLC). The following summarizes the results of the modeling for each pollutant:

Pollutant: ethanol

TLV (mg/m³): 1880

Maximum Hourly Emission Rate (lbs/hr): 2.32

Predicted 1-Hour Maximum Ground-Level Concentration (ug/m³): 244.5

MAGLC (ug/m³): 44761.9

OAC Chapter 3745-31 requires permittees to apply for and obtain a new or modified permit to install prior to making a "modification" as defined by the OAC rule 3745-31-01. The permittee is hereby advised that the following changes to the process may be determined to be a "modification":

- a. changes in the composition of the materials used (typically for coatings or cleanup materials), or the use of new materials, that would result in the emission of a compound with a lower Threshold Limit Value (TLV), as indicated in the most recent version of the handbook entitled "American Conference of Governmental Industrial Hygienists (ACGIH)," than the lowest TLV value specified in the above table;
- b. changes to the emissions unit or its exhaust parameters (e.g., increased emission rate [not including an increase in an "allowable" emission limitation specified in the terms and conditions of this permit], reduced exhaust gas flow rate, and decreased stack height);
- c. changes in the composition of the materials used, or use of new materials, that would result in the emission of an air contaminant not previously permitted; and,
- d. changes in the composition of the materials, or use of new materials, that would result in an increase in emissions of any pollutant that has a listed TLV.

The Ohio EPA will not consider any of the above-mentioned as a "modification" requiring a permit to install, if the following conditions are met:

- a. the change is not otherwise considered a "modification" under OAC Chapter 3745-31;
- b. the permittee can continue to comply with the allowable emission limitations specified in its permit to install; and,
- c. prior to the change, the applicant conducts an evaluation pursuant to the Air Toxic Policy, determines that the changed emissions unit still satisfies the Air Toxic Policy, and the

permittee maintains documentation that identifies the change and the results of the application of the Air Toxic Policy for the change.

For any change to the emissions unit or its method of operation that either would require an increase in the emission limitation(s) established by this permit or would otherwise be considered a "modification" as defined in OAC rule 3745-31-01, the permittee shall obtain a final permit to install prior to the change.

2. In accordance with OAC rule 3745-31-05(D), sections A2, C1, C2, C3, D, and E of these terms and conditions constitute the federally enforceable portions of this permit to install.

PART II - SPECIAL TERMS AND CONDITIONS FOR SPECIFIC EMISSIONS UNIT(S) [Continued]

A. Applicable Emissions Limitations and/or Control Requirements

1. The specific operations(s), property, and/or equipment which constitute this emissions unit are listed in the following table along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures. Emissions from this unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

<u>Operations, Property, and/or Equipment</u>	<u>Applicable Rules/Requirements</u>	<u>Applicable Emissions Limitations/Control Measures</u>
BGM Laminator	OAC rule 3745-31-05(A)(3)	0.37 lb/hr of volatile organic compounds (VOC) for coatings
	OAC rule 3745-31-05(D)	Combined annual emissions from all facility emissions units shall not exceed the following as rolling, 12-month summations: 95.0 tons of VOC and OC; 24.0 tons of all hazardous air pollutants (HAPs); and 9.0 tons of any individual HAP. See A.2.a below.
	OAC rule 3745-21-09(F)	See A.2.b below.

2. Additional Terms and Conditions

- 2.a The emissions of volatile organic compounds (VOC) and organic compounds (OC), individual Hazardous Air Pollutant (HAP), and combined HAPs from this facility which consists of emissions units K001, K002, K003, K004, K005, K006, K007, K008, K009, and P001 shall not exceed 95.0, 9.0, and 24.0 tons per year, respectively, based upon a rolling, 12-month summation of the monthly emissions. The cumulative emissions table is not necessary because the permittee has sufficient records to demonstrate compliance with the rolling 12-month emissions limitation for the past 12 months.
- 2.b The permittee shall not employ any adhesive with a VOC content in excess of 2.9 pounds of VOC per gallon of adhesive, excluding water and exempt solvents.

B. Operational Restrictions

None.

C. Monitoring and/or Recordkeeping Requirements

1. In order to demonstrate compliance with the facility-wide emission limitations, the permittee shall maintain monthly records which contain the following information:
 - a. the name and company identification of each ink, coating, and cleanup material, as applied;
 - b. Material Safety Data Sheets from the supplier that list the VOC content of each ink, coating, and cleanup material, as applied, in pounds per gallon;
 - c. the number of gallons of each ink, coating, and cleanup material, as applied;
 - d. Material Safety Data Sheets from the supplier that list the percent, by weight, of each HAP for each ink, coating, and cleanup material; and,
 - e. the VOC content in percentage VOC by volume of each coating and ink, excluding water and exempt solvents, or the VOC content in percentage VOC by volume of the volatile matter in each coating and ink.

2. The permittee shall, on a monthly basis, calculate and record for the entire facility which consists of emissions units K001, K002, K003, K004, K005, K006, K007, K008, K009, and P001 the individual HAP, combined HAP, and VOC and OC emission rates, in tons per month, and in tons per rolling, 12-month period.

These mass emissions shall be calculated in accordance with the following methodology:

Facility individual HAP

summation of the pounds of each ink, coating, and cleanup material multiplied by the individual HAP content, in weight percent, for each individual HAP

Facility combined HAP

summation of all individual HAPs from the facility calculation

Facility VOC and OC emissions

summation of the gallons of each ink, coating, and cleanup material multiplied by the VOC content, in pounds/gallon

3. The permittee shall collect and record the following information each month for this emissions unit:
 - a. the number of hours the emissions unit was in operation;
 - b. the production of the emissions unit in thousand square feet (msf); and
 - c. the calculated hourly VOC emission rate, in pounds per hour (average).

The VOC emission rate shall be calculated in accordance with the following methodology:

Divide the production for the line, in msf, by the total production for the entire facility for the month, in msf, to obtain a production ratio for the line. Multiply the production ratio for the line by the total VOC emissions for the month to obtain the pounds of VOC per month per line. Divide the result by the hours of operation for the month for the line to obtain the average hourly VOC emission rate for the line.

4. The permittee shall collect and record the following information for each change where the air toxic modeling was required pursuant to the Air Toxic Policy:
 - a. the background data that describes the parameters changed (composition of materials, new pollutants emitted, change in stack/exhaust parameters, etc.); and,
 - b. a copy of the resulting computer model runs that show the results of the application of the Air Toxic Policy for the change.

D. Reporting Requirements

1. The permittee shall submit deviation (excursion) reports which identify all exceedances of the rolling, 12-month facility emission limitations for VOC and OC, individual HAP, and combined HAP.
2. The permittee shall submit deviation (excursion) reports which include any record showing an exceedance of the hourly allowable mass emission rate for VOC.
3. The permittee shall submit deviation (excursion) reports which identify any monthly record showing the use of noncomplying coatings or inks unless the daily record shows that the daily volume-weighted average VOC content of all coatings and inks employed on that day does not exceed the applicable emission limitation. The notification shall include a copy of such record and shall be sent to the Director (Akron Regional Air Quality Management) within 45 days after the exceedance occurs.
4. The deviation reports shall be submitted in accordance with the requirements specified in Part I - General Term and Condition 3 of this permit.

E. Testing Requirements

1. Compliance with the emission limitations in sections A.1 and A.2 of these terms and conditions shall be determined in accordance with the following methods:

- a. Emission Limitation:

0.37 lb/hr of VOC

Applicable Compliance Method:

The permittee shall demonstrate compliance with the above limit based upon the record keeping requirements of Section C.3 of these terms and conditions.

USEPA Methods 24 and 24A shall be used to determine the VOC content for adhesives, and related coatings, respectively. If, pursuant to Section 4.3 of Method 24, 40 CFR Part 60, Appendix A, a permittee determines that Method 24 or 24A cannot be used for a particular adhesive, the permittee shall so notify the Administrator of the USEPA and shall use formulation data for that adhesive to demonstrate compliance until the USEPA provides alternative analytical procedures or alternative precision statements for Method 24 or 24A.

- b. Emission Limitation:

95.0 TPY VOC and OC, facility-wide

Applicable Compliance Method:

The permittee shall demonstrate compliance with the above limit based upon the record keeping requirements of Sections C.1 and C.2 of these terms and conditions.

USEPA Methods 24 and 24A shall be used to determine the VOC content for coatings, flexographic and rotogravure printing inks, and related coatings, respectively. If, pursuant to Section 4.3 of Method 24, 40 CFR Part 60, Appendix A, a permittee determines that Method 24 or 24A cannot be used for a particular coating or ink, the permittee shall so notify the Administrator of the USEPA and shall use formulation data for that coating or ink to demonstrate compliance until the USEPA provides alternative analytical procedures or alternative precision statements for Method 24 or 24A. Formulation data shall be used to determine the VOC content of each cleanup material.

- c. Emission Limitation:

24.0 TPY all HAPs, facility-wide

Applicable Compliance Method:

The permittee shall demonstrate compliance with the above limit based upon the record keeping requirements of Sections C.1 and C.2 of these terms and conditions.

Formulation data shall be used to determine the HAP content for coatings, flexographic and rotogravure printing inks, cleanup materials, and related coatings, respectively.

d. Emission Limitation:

9.0 TPY any individual HAP, facility-wide

Applicable Compliance Method:

The permittee shall demonstrate compliance with the above limit based upon the record keeping requirements of Sections C.1 and C.2 of these terms and conditions.

Formulation data shall be used to determine the HAP content for coatings, flexographic and rotogravure printing inks, cleanup materials, and related coatings, respectively.

e. Emission Limitation:

2.9 pounds of VOC per gallon of adhesive, excluding water and exempt solvents

Applicable Compliance Method:

The permittee shall demonstrate compliance with the above limit based upon the record keeping requirements of Section C.4 of these terms and conditions.

USEPA Methods 24 and 24A shall be used to determine the VOC content for adhesives, and related coatings, respectively. If, pursuant to Section 4.3 of Method 24, 40 CFR Part 60, Appendix A, a permittee determines that Method 24 or 24A cannot be used for a particular adhesive, the permittee shall so notify the Administrator of the USEPA and shall use formulation data for that adhesive to demonstrate compliance until the USEPA provides alternative analytical procedures or alternative precision statements for Method 24 or 24A.

F. Miscellaneous Requirements

1. This permit allows the use of materials (typically coatings and cleanup materials) specified by the permittee in the permit to install application for this emissions unit. To fulfill the best available technology requirements of (OAC) rule 3745-31-05 and to ensure compliance with OAC rule 3745-15-07 (Air Pollution Nuisances Prohibited), the emission limitation(s) specified in this permit was (were) established using the Ohio EPA's "Air Toxic Policy" and is (are) based on both the materials used and the design parameters of the emissions unit's exhaust system, as specified in the application. The Ohio EPA's "Air Toxic Policy" was applied for each pollutant using the SCREEN 3.0 model and comparing the predicted 1-hour maximum ground-level concentration to the

Maximum Acceptable Ground-Level Concentration (MAGLC). The following summarizes the results of the modeling for each pollutant:

Pollutant: vinyl acetate

TLV (mg/m³): 35.0

Maximum Hourly Emission Rate (lbs/hr): 0.37

Predicted 1-Hour Maximum Ground-Level Concentration (ug/m³): 39.0

MAGLC (ug/m³): 833.3

OAC Chapter 3745-31 requires permittees to apply for and obtain a new or modified permit to install prior to making a “modification” as defined by the OAC rule 3745-31-01. The permittee is hereby advised that the following changes to the process may be determined to be a “modification”:

- a. changes in the composition of the materials used (typically for coatings or cleanup materials), or the use of new materials, that would result in the emission of a compound with a lower Threshold Limit Value (TLV), as indicated in the most recent version of the handbook entitled "American Conference of Governmental Industrial Hygienists (ACGIH)," than the lowest TLV value specified in the above table;
- b. changes to the emissions unit or its exhaust parameters (e.g., increased emission rate [not including an increase in an “allowable” emission limitation specified in the terms and conditions of this permit], reduced exhaust gas flow rate, and decreased stack height);
- c. changes in the composition of the materials used, or use of new materials, that would result in the emission of an air contaminant not previously permitted; and,
- d. changes in the composition of the materials, or use of new materials, that would result in an increase in emissions of any pollutant that has a listed TLV.

The Ohio EPA will not consider any of the above-mentioned as a “modification” requiring a permit to install, if the following conditions are met:

- a. the change is not otherwise considered a “modification” under OAC Chapter 3745-31;
- b. the permittee can continue to comply with the allowable emission limitations specified in its permit to install; and,
- c. prior to the change, the applicant conducts an evaluation pursuant to the Air Toxic Policy, determines that the changed emissions unit still satisfies the Air Toxic Policy, and the permittee maintains documentation that identifies the change and the results of the application of the Air Toxic Policy for the change.

For any change to the emissions unit or its method of operation that either would require an increase in the emission limitation(s) established by this permit or would otherwise be considered a "modification" as defined in OAC rule 3745-31-01, the permittee shall obtain a final permit to install prior to the change.

2. In accordance with OAC rule 3745-31-05(D), sections A2, C1, C2, C3, D, and E of these terms and conditions constitute the federally enforceable portions of this permit to install.
