Multiple wells drawing water from a single aquifer may be considered one treatment plant for determining the number of TTHM and HAA5 samples required, with approval from Ohio EPA.

\* Total chlorine samples are collected in the distribution system at the same time and place as total coliforms are sampled.

\*\* One sample for Chlorite at each of the following locations: near the first customer, at a location representative of the average residence time, and at a location reflecting maximum residence time of the water in the distribution system.

**Asbestos Sampling Information**

Collect one sample at a tap served by asbestos-cement pipe. The sample monitoring point (smp) code is DS000. Due to limited Laboratory capacity and a 48 hour filtering requirement, contact your lab early in the monitoring period to schedule a sampling date.
