OPERATION AND MAINTENANCE
DREDGING AND DREDGED SEDIMENT PLACEMENT

CONNEAULT HARBOR
ASHTABULA COUNTY, OHIO

This Public Notice has been prepared pursuant to Section 404(a) of the Clean Water Act (CWA). It is being administered in conformance with U.S. Army Corps of Engineers (USACE) regulation, "Practice and Procedure: Final Rule for Operation and Maintenance of Army Corps of Engineers Civil Works Projects involving the Discharge of Dredged Materials into Waters of the United States or Ocean Waters," 33 Code of Federal Regulations (CFR) 337.1. The purpose of this Public Notice is to specify what dredged/fill materials would be discharged into waters of the United States by implementation of the proposed action, and advise all interested parties of the proposed project and to provide an opportunity to submit comments, or request a public hearing.

The USACE anticipates the need to dredge and place sediment excavated from the authorized federal Inner and Outer Navigation Channels of Conneaut Harbor, which is located on the southern shore of Lake Erie at the mouth of the Conneaut Creek, in order to maintain sufficient water depths for deep-draft commercial and recreational navigation. Federal navigation channels within the Harbor include the Outer Harbor Channel, Inner Harbor Channel, and Municipal Access Channel. The attached map (Figure 1) shows the authorized limits and depths of the federal navigation channels. To ensure that the minimum authorized depth in Conneaut Harbor is maintained and to account for dredging tolerance, up to an additional one foot of sediment may be dredged. An estimated total of approximately 300,000 cubic yards of sediment will be dredged from Conneaut Harbor federal navigation channels during dredging operation.

The dredging operation at Conneaut Harbor is tentatively scheduled to be performed during the period between 1 July 2018 and 15 September 2018.

A contractor of the federal government will accomplish the project. Sediments will be removed from the channel bottom by a mechanical or hydraulic dredge and placed into hoppers aboard ship or scow for transport to the placement areas. The method of excavation will be determined by the contractor performing the maintenance dredging. In previous years, clamshell and hopper
dredges have been used to complete the required work.

The sediment to be dredged from the Conneaut Harbor federal navigation channels consists primarily of silts and clays, with some sands. The quality of sediments in the federal navigation channels were evaluated using primarily 2016 sediment data in accordance with formal Clean Water Act Section 404(b)(1) Guidelines testing and evaluation guidance contained in the U.S. Environmental Protection Agency (USEPA)/USACE Great Lakes Dredged Material Testing and Evaluation Manual (1998) and Evaluation of Dredged Material Proposed for Discharge in Waters of the U.S.—Testing Manual (1998). Based on this evaluation, the sediments proposed for dredging in 2017 have been determined to meet contaminant determination Clean Water Act Section 404(b)(1) Guidelines for open-lake placement.

Historically, sediment from the Municipal Access Channel of Conneaut Harbor has been primarily coarse-grain in nature and in the past has been placed in the existing authorized nearshore placement area which is located approximately 1,500 feet east of the Conneaut Harbor East Breakwater Extension. The USACE is not proposing to dredge the Municipal Access Channel during this maintenance dredging cycle; therefore, no sediment will be placed in the nearshore placement area in 2018. All sediment dredged (predominantly fine-grain) will be discharged at an existing open-lake placement area in Lake Erie, located four miles from the West Breakwater light, at an azimuth of 314°00’. The proposed placement area is depicted in Figure 2.

Pursuant to Section 401 of the CWA, Water Quality Certification (WQC) from the Ohio Environmental Protection Agency (OEPA) is required for the discharge of dredged sediment. Therefore, a copy of this Public Notice has been provided to OEPA requesting WQC, or waiver thereof, for the associated placement of dredged sediment.

The environmental effects of the dredging operation are documented in the Final Environmental Impact Statement (FEIS), Operation and Maintenance, Conneaut Harbor, Ohio (1975); Supplemental Information Report and Section 404(b)(1) Evaluation, Operation and Maintenance, Conneaut Harbor, Ohio (1982 and 2004); and Environmental Assessment (EA)/Finding of No Significant Impact Statement (FONSI) and Section 404(b)(1) Evaluation for Conneaut Harbor, Ohio (1999). These documents, and supplemental documentation, have been submitted to USEPA. Copies are available for examination at the Buffalo District office.

There are no listed historic properties or properties determined as being eligible for listing in the National Register of Historic Places that will be affected by this project. By this notice, the National Park Service is advised that currently unknown archaeological, scientific, prehistorical or historical data may be lost or destroyed by the work to be accomplished.

This office has determined that the proposed project will have No Effect upon any species proposed or designated by the U.S. Department of the Interior as threatened or endangered, nor will the proposed work result in an Adverse Modification of designated critical habitat for any such species. Therefore, unless new information indicates otherwise, no further consultation
pursuant to Section 7 of the Endangered Species Act Amendments of 1978 will be undertaken with the U.S. Fish and Wildlife Service.

This work will be undertaken in a manner consistent, to the maximum extent practicable, with the State of Ohio Coastal Resources Management Program. A Coastal Management Program Federal Consistency Determination has been submitted to the Ohio Department of Natural Resources (ODNR) documenting this determination. Due to the project’s proximity to the Pennsylvania State border, this activity has also been evaluated with respect to the Pennsylvania Coastal Resources Management Program. This evaluation has determined that the work will be undertaken in a manner consistent, to the maximum extent practicable, with the Pennsylvania Coastal Resources Management Program. A Coastal Management Program Federal Consistency Determination has been submitted to the Pennsylvania Department of Environmental Protection (PADEP) documenting this determination.

The decision whether to perform dredging has been based on an evaluation of the probable impact, including cumulative impacts of the proposed activity on the public interest. That decision reflects the national concern for both protection and utilization of important resources. The benefit which reasonably may be expected to accrue from the proposal has been balanced against its reasonably foreseeable detriments. All factors which may be relevant to the proposal have been considered including the cumulative factors thereof; among those are conservation, economics, aesthetics, general environmental concerns, wetlands, historic properties, fish and wildlife values, flood hazards, floodplain values, land use, navigation, shoreline erosion and accretion, recreation, water supply and conservation, water quality, energy needs, safety, food and fiber production, mineral needs, considerations of property ownership and, in general, the needs and welfare of the people.

This activity is being coordinated with the following agencies, as well as other appropriate federal, state and local agencies and organizations:

- National Park Service
- Ohio Department of Natural Resources
- Ohio Environmental Protection Agency
- Ohio Historic Preservation Office
- Pennsylvania Department of Environmental Protection
- U.S. Coast Guard
- U.S. Department of the Interior, Fish and Wildlife Service
- U.S. Environmental Protection Agency

Any interested parties and/or agencies desiring to express their views concerning these proposed discharges of dredged sediment may do so by filing their comments, in writing, no later than 30 days from the date of this notice. Any person who has an interest which may be affected by the discharge of this dredged sediment may request a public hearing. The request must be submitted in writing to the undersigned within 30 days of the date of this Public Notice. The request must clearly set forth the interest which may be affected, and the manner in which the interest may be
affected, by this activity.

Interested parties are encouraged to contact the USACE - Buffalo District with their comments regarding the proposed dredging of Conneaut Harbor. Please review this Public Notice and send your comments in writing within 30 days to the following e-mail address:

ConneautDredging@usace.army.mil

or via mail to:
